1. INTRODUCTION

The Hood River-White Salmon Bridge Replacement Project (the "Project," formerly named the SR-35 Columbia River Crossing Project) would construct a replacement bridge and then remove the existing Hood River Bridge between White Salmon, Washington, and Hood River, Oregon (Exhibit 1). The bridge is owned by the Port of Hood River (the Port), serving an average of over 4 million trips annually.

Exhibit 1. Project Area

The purpose of this Project is to improve multi-modal transportation of people and goods across the Columbia River between the communities of White Salmon and Bingen, Washington and Hood River, Oregon. The Project is intended to: a) improve traffic operations for current and future cross-river traffic and at connections to I-84 and SR 14; b) provide a cross-river connection for bicyclists and pedestrians; c) improve vehicle and freight travel safety by reducing real and perceived hazards; d) maintain and improve a transportation linkage between the White Salmon, Bingen, and Hood River communities, businesses, and services; e) fulfill the legislative directives tied to the Project funding; f) improve river navigation for vessels passing under the bridge; and g) improve the river crossing's seismic resiliency.

The overall need for the Project is to rectify current and future transportation inadequacies and deficiencies associated with the existing bridge. Specifically, these needs are to:

- Present Capacity: substandard width and operational issues are causing traffic congestion on the bridge and at both approaches
- Future Transportation Demand: the existing bridge is not designed to meet future travel demand for vehicles
- Bicycle and Pedestrian Facilities: lack of bicycle and pedestrian facilities limits multi-modal mobility
- Safety: narrow lanes and lack of shoulder create real and perceived safety hazards
- Social Demands/Economic Development: the existing bridge restricts the current and projected flow of goods, labor and consumers across the river
- Legislation: comply with federal funding obligation Transportation Equity Act for the 21st Century (TEA-21), the Washington State Legislature designation of the SR-35 corridor, and Oregon HB 2017
- River Navigation: the substandard horizontal clearance creates difficulties for safe vessel navigation
- Seismic Deficiencies: the existing bridge does not meet current seismic standards and is vulnerable to a seismic event

The Project began in 1999 with a feasibility study that ultimately resulted in the publication of the State Route (SR) 35 Columbia River Crossing Draft Environmental Impact Statement (EIS) in 2003, which identified the "EC-2 West Alignment" as the preliminary preferred alternative. In 2011, the Type, Size, and Location (TS&L) Study recommended a fixed-span concrete segmental box girder bridge as the recommended bridge type. In 2017, the Project was relaunched to complete the National Environmental Policy Act (NEPA) process. This report provides an update to the 2003 Hazardous Materials Technical Report describing the existing conditions and anticipated construction, direct, and indirect impacts on hazardous materials. Measures to avoid, minimize, and/or mitigate these impacts are also identified in this report.

2. PROJECT ALTERNATIVES

Four alternatives are being evaluated to address the Project's purpose and need:

- No Action Alternative
- Preferred Alternative EC-2
- Alternative EC-1
- Alternative EC-3

Exhibit 2 shows the alignment of the existing bridge, which represents the No Action Alternative, and the three build alternatives. The build alternatives connect to SR 14 in White Salmon, Washington, and Button Bridge Road in Hood River, Oregon, just north of the Interstate 84 (I-84)/United States Highway 30 (US 30) interchange (Exit 64).

Each alternative is summarized in Exhibit 3 and described in more detail in the following sections. Exhibit 4 illustrates the navigational clearance for the existing bridge and the replacement bridge (same for each build alternative).

Exhibit 2. Location of the Preferred Alternative EC-2, Alternative EC-1, and Alternative EC-3

Exhibit 3. Summary Comparison of Key Elements of Alternatives

	No Action Alternative	Preferred Alternative EC-2	Alternative EC-1	Alternative EC-3
Bridge alignment	No change	Slightly west of existing	WA: West of existing OR: Slightly west of existing	Slightly east of existing
Bridge structure				
Bridge type	Steel deck truss bridge with vertical lift span	Segmental concrete box girder bridge (fixed span)		
Total number of piers (in water / on land)	28 (20 / 8)	13 (12 / 1)	13 (11 / 2)	13 (12 / 1)
Structure length	4,418 feet	4,412 feet	4,375 feet	4,553 feet
Travel lanes	9-foot 4.75-inch lanes	12-foot lanes		
Roadway shoulders	No shoulders	8-foot shoulders		
Vehicle height limit	14 feet-7 inches	None		
Shared Use Path	None	12-foot wide, only on west side with overlooks		
Bridge deck	Steel-grated	Concrete		
Vehicle Gross Weight Limit	80,000 pounds (lbs.); no trip permit allowance for overweight vehicles	> 80,000 lbs., with approved trip permit		
Design speed	Unknown	50 miles per hour (mph)		
Posted speed	25 mph	35 mph		
Toll collection	Toll booth on Oregon side	Electronic tolling/No toll booth		
Stormwater treatment	None	Detention and water quality treatment		
Navigation clearance	246 feet horizontal by 57 feet vertical when bridge is down and up to 148 feet vertical when lifted	450 feet horizontal x 80 feet vertical (maximum horizontal opening) 250 feet horizontal x 90 feet vertical (centered within maximum vertical opening)		
SR 14/Hood River Bridge intersection	Signalized intersection	Roundabout slightly west of existing intersection; SR 14 raised approximately 2 feet above existing road level	Roundabout with connection to N. Dock Grade Road west of existing intersection; SR 14 raised approximately 17 feet above existing road level	Roundabout slightly east of existing intersection; SR 14 remains at existing road level
Button Bridge Road/E. Marina Way intersection	Signalized intersection	Signalized intersection		
Anticipated construction duration	None	6 years (3 years to construct the replacement bridge and 3 years to remove the existing bridge)		

Exhibit 4. Navigation Clearance of Existing Bridge and Proposed Replacement Bridge

2.1. No Action Alternative

The No Action Alternative would retain the existing bridge in its existing condition and configuration. Routine operations would continue and maintenance would be implemented to continue operations. Under the No Action Alternative, elements of the existing bridge include:

- **Alignment:** The bridge would continue to span the Columbia River between its northern terminus at the SR 14/Hood River Bridge intersection in White Salmon, Washington, and its southern terminus at the Button Bridge Road/E. Marina Way intersection in Hood River, Oregon, as shown in the aerial photograph in Exhibit 2.
- **Type:** The bridge would continue to be a 4,418-foot steel deck truss bridge with a vertical lift span. The bridge would continue to have 20 piers in the Columbia River.
- **Ownership:** The bridge will continue to be owned and operated by the Port.
- **Vehicle lanes:** The bridge will continue to have one narrow (9 feet, 4.75 inches) travel lane in each direction and no shoulders.
- **Bicycle and pedestrian facilities:** The bridge would continue to have no pedestrian or bicycle facilities, and signage would continue to prohibit pedestrians and bicycles on the bridge.
- **Speed:** The posted speed limit on the bridge would continue to be 25 mph.
- **Vehicle restrictions:** Vehicles would continue to be weight-restricted to 80,000 lbs.; vehicles with approved trip permits would still not be allowed to use the bridge. Wide loads would continue to be prohibited without special arrangements, and large vehicles would be encouraged to turn their mirrors in. The height limit for vehicles would continue to be 14 feet, 7 inches where the lift span occurs.
- **Tolling:** The bridge would continue to be tolled for all vehicles with a toll booth on the south end of the bridge and electronic tolls collected through the Port's Breezeby system. Plans to shift to all ETC are being considered, but there is no certainty they will be implemented.

- Navigational clearance: The horizontal clearance for marine vessels would continue to be 246 feet, narrower than the navigation channel width of 300 feet, as shown Exhibit 4. The vertical clearance would continue to be 57 feet when the lift span is down and 148 feet when it is raised; vessels would continue to be required to request bridge lifts in advance. The lift span section would continue to use gate and signals to stop traffic for bridge lifts.
- Seismic resilience: The bridge would continue to be seismically vulnerable and would not be cost effective to be seismically retrofitted.
- Stormwater: No stormwater detention or water quality treatment would be provided for the bridge. Stormwater on the bridge would continue to drain directly into the Columbia River through the steel-grated deck.
- Roadway connections: The bridge would continue to connect to SR 14 on the Washington side at the existing signalized SR 14/Hood River Bridge intersection. On the Oregon side, the southern end of the bridge would continue to transition to Button Bridge Road, connecting to the local road network at the existing signalized Button Bridge Road/E. Marina Way intersection north of I-84. The bridge would continue to cross over the BNSF Railway tracks on the Washington side and over the Waterfront Trail along the Oregon shoreline.
- Bicycle and pedestrian connections: The bridge would continue not to provide bicycle or pedestrian connections across the Columbia River. Bicyclists and pedestrians wanting to cross the river would continue to need to use an alternate means of transportation, such as the Mt. Adams Transportation Service (MATS) White Salmon/Bingen to Hood River bus (buses provide bicycle racks), or a private vehicle.

The Supplemental Draft EIS considers two scenarios for the No Action Alternative:

- End of bridge lifespan: assumes that the existing Hood River Bridge would remain in operation through 2045¹ and would be closed sometime after 2045 when maintenance costs would become unaffordable. At such a time, the bridge would be closed to vehicles and cross-river travel would have to use a detour route approximately 21 miles east on SR 14 or 23 miles east on I-84 to cross the Columbia River using The Dalles Bridge (US 197). Alternatively, vehicles could travel 25 miles west on SR 14 or 21 miles west on I-84 to cross the Columbia River via the Bridge of the Gods. When the bridge would be closed, the lift span would be kept in a raised position to support large vessel passage that previously required a bridge lift or the existing bridge would be removed.
- Catastrophic event: addresses the possibility that an extreme event that damages or otherwise renders the bridge inoperable would occur prior to 2045. Such events could include an earthquake, landslide, vessel strike, or other unbearable loads that the bridge structure cannot support.

¹ The year 2045 is the design horizon for the Project. The design horizon is the year for which the Project was designed to meet anticipated needs.

2.2. Preferred Alternative EC-2

Alternative EC-2 would construct a replacement bridge west of the existing bridge. The existing bridge would be removed following construction of the replacement bridge. Under Alternative EC-2, elements of the replacement bridge would include:

- **Alignment:** The main span of the bridge would be approximately 200 feet west of the existing lift span. The bridge terminus in White Salmon, Washington, would be located approximately 123 feet west of the existing SR 14/Hood River Bridge intersection, while the southern terminus would be in roughly the same location at the Button Bridge Road/E. Marina Way intersection in Hood River, Oregon, as shown in Exhibit 5 and Exhibit 6.
- **Type:** The bridge would be a 4,412-foot fixed-span segmental concrete box girder bridge with a concrete deck and no lift span. The bridge would have 12 piers in the Columbia River and one land-based pier on the Washington side of the river.
- **Ownership:** While the Port may own and operate the replacement bridge, other options for the ownership and operation of the replacement bridge that may be considered include other governmental entities, a new bi-state bridge authority, and a public-private partnership, depending on the funding sources used to construct the replacement bridge.
- **Vehicle lanes:** The bridge would include one 12-foot travel lane in each direction, an 8-foot shoulder on each side, as shown in Exhibit 7.
- **Bicycle and pedestrian facilities:** The bridge would include a 12-foot wide shared use path separated from traffic with a barrier on the west side, as shown in Exhibit 7. In the middle of the bridge the shared use path would widen an additional 10 feet in two locations to provide two 40-foot long overlooks over the Columbia River and west into the CRGNSA with benches; the overlook locations are shown in Exhibit 5 and Exhibit 6. The cross-section of the overlooks is shown in Exhibit 7.
- **Speed:** The design speed for the bridge would be 50 mph with a posted speed limit of 35 mph.
- **Vehicle restrictions:** Vehicles would no longer be limited by height, width, or weight. Vehicles exceeding 80,000 lbs. that have approved trip permits could use the bridge.
- **Tolling:** Tolls for vehicles would be collected electronically so there would be no toll booth on either side of the bridge. No tolls would be collected from non-motorized users (e.g., pedestrians, bicyclists) who travel on the shared use path.
- **Navigational clearance:** Vertical clearance for marine vessels would be a minimum of 80 feet. The horizontal bridge opening for the navigation channel would be 450 feet, greater than the existing 300-foot wide federally recognized navigation channel, as shown in Exhibit 4. Centered within this 450-foot opening, there would be a 250-foot wide opening with a vertical clearance of 90 feet. Similar to the existing bridge, the replacement bridge would cross the navigation channel at roughly a perpendicular angle as shown in Exhibit 5 and Exhibit 6.
- **Seismic resilience:** The bridge would be designed to be seismically sound under a 1,000-year event and operational under a Cascadia Subduction Zone earthquake.

- Stormwater: Stormwater from the entire Project area (bridge and improved roadways) would be collected and piped to detention and treatment facilities on both sides of the bridge as shown in Exhibit 6. On the Washington side, separate stormwater facilities would be used for the roadways and the bridge.
- Roadway connections: The bridge would connect to SR 14 on the Washington side at a new two-lane roundabout slightly west of the existing SR 14/Hood River Bridge intersection, as shown in Exhibit 6. On the Oregon side, the southern end of the bridge would transition to Button Bridge Road, connecting to the local road network at the existing signalized Button Bridge Road/E. Marina Way intersection north of I-84. The private driveway on Button Bridge Road north of E. Marina Way may be closed under this alternative. Like the existing bridge, the replacement bridge would cross over the BNSF Railway tracks on the Washington side and over the Waterfront Trail along the Oregon shoreline.
- Bicycle and pedestrian connections: The new shared use path would connect to existing sidewalks along the south side of SR 14 in Washington and to roadway shoulders (for bicyclists) on both sides of SR 14 at the new roundabout with marked crosswalks, as shown in Exhibit 6. On the Oregon side, the shared use path would connect to existing sidewalks, bicycle lanes, and local roadways at the signalized Button Bridge Road/E. Marina Way intersection.
- Cost: Total Project construction cost is estimated to be \$300 million in 2019 dollars.

Exhibit 5. Preferred Alternative EC-2 Alignment

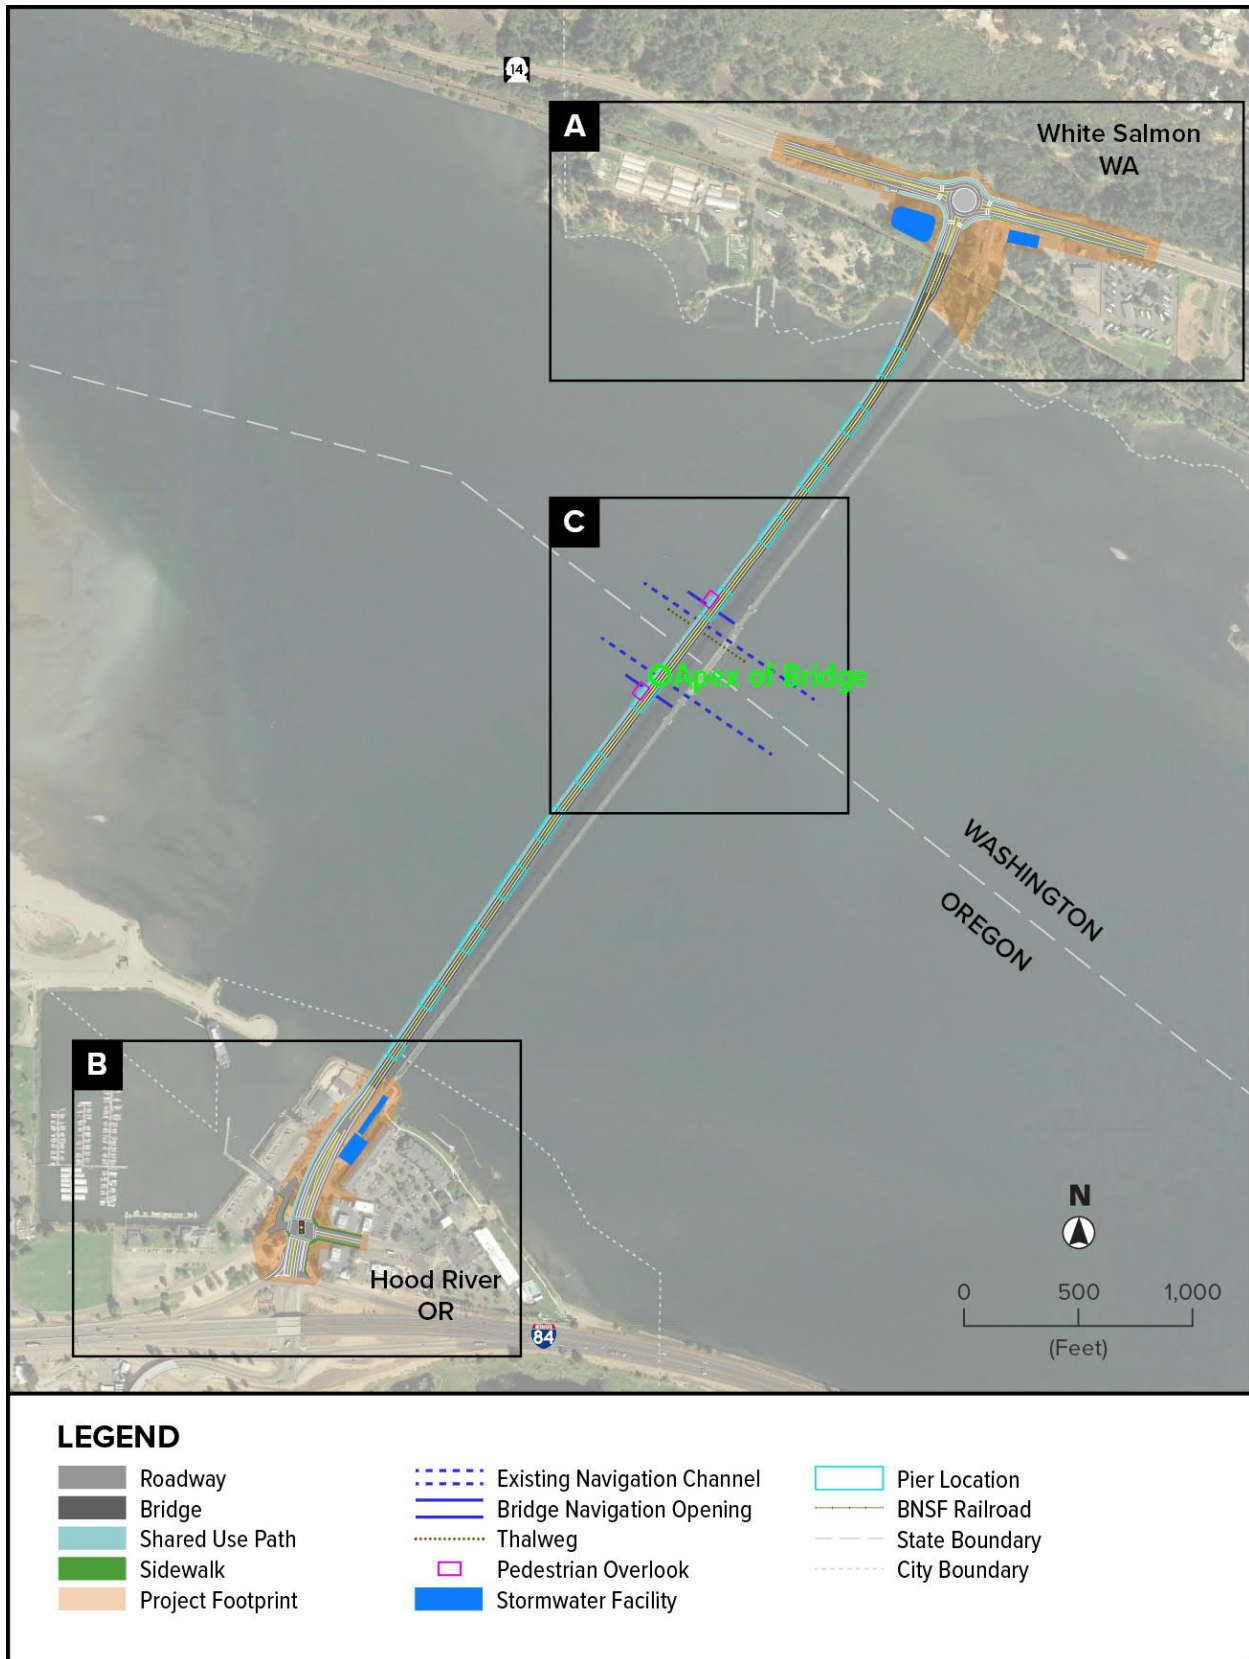

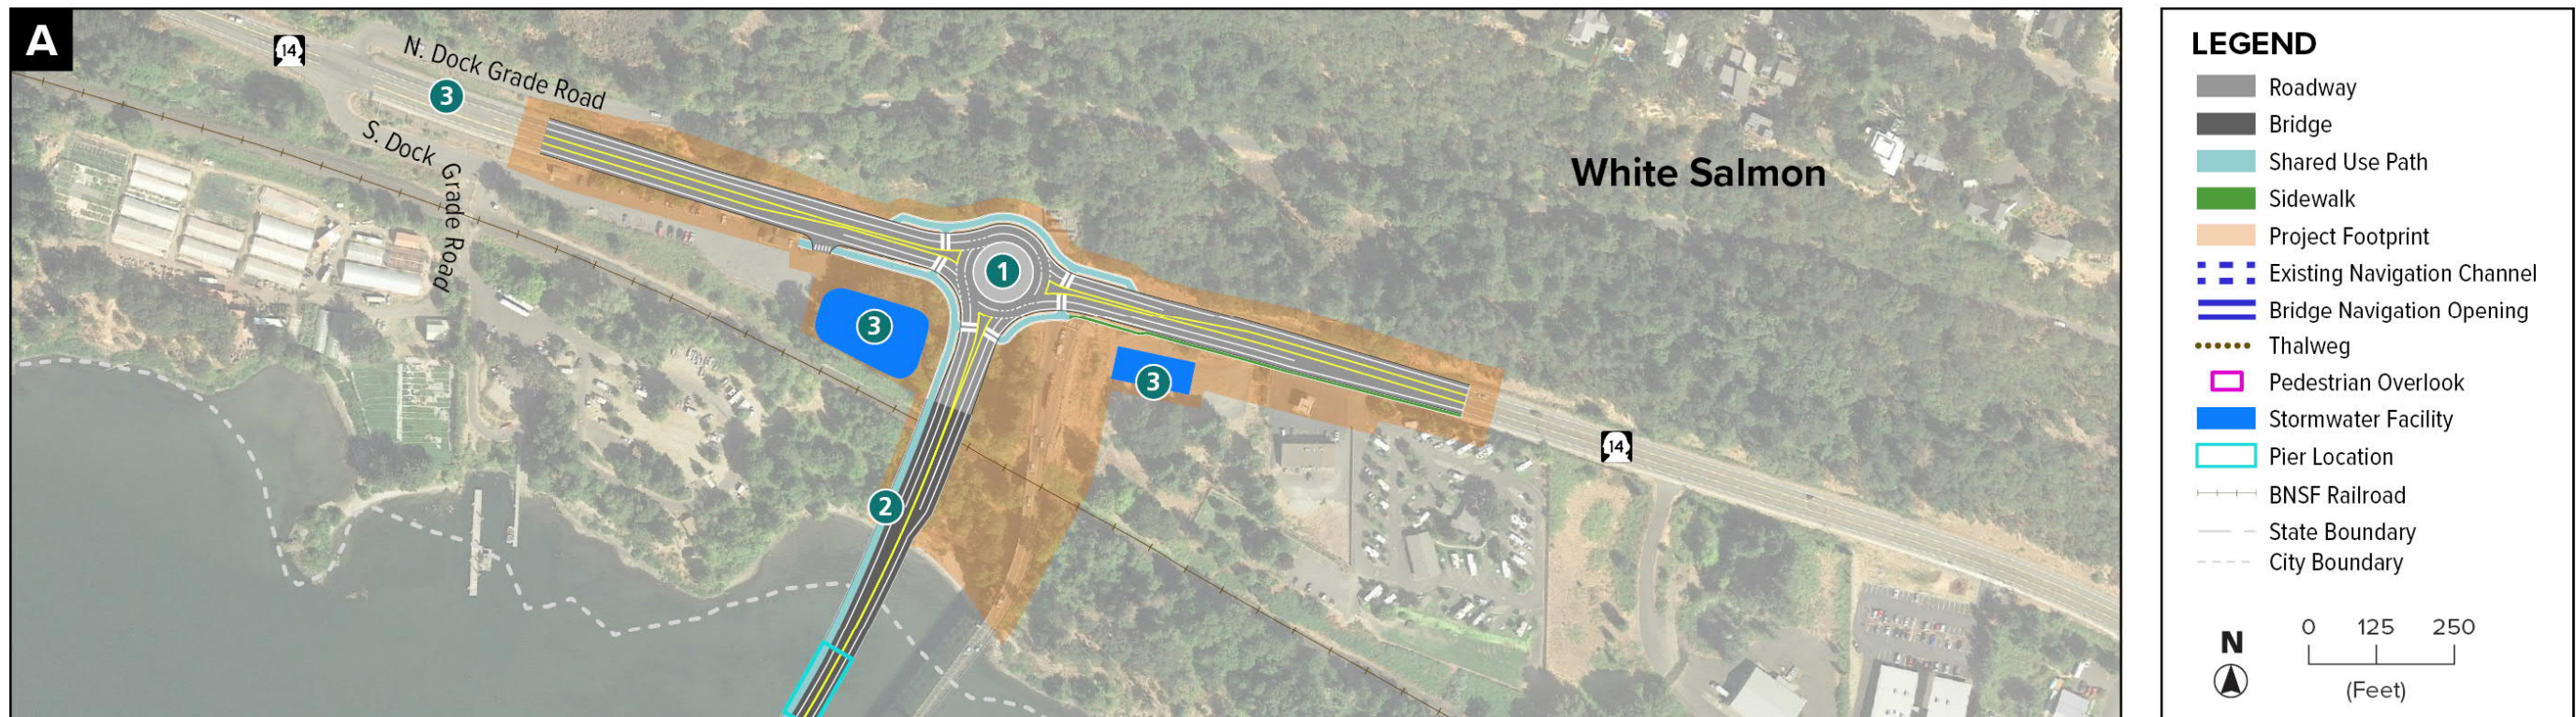

Exhibit 6. Preferred Alternative EC-2 Enlargements

- 1 New two-lane roundabout with marked crosswalks
- 2 New shared use path across bridge
- 3 New stormwater detention and water quality treatment facilities
- 4 Elimination of toll booth
- 5 New wider bridge opening crosses navigation channel at a perpendicular angle

This page intentionally left blank.

Exhibit 7. Replacement Bridge Typical Cross-Section

2.3. Alternative EC-1

Alternative EC-1 would construct a replacement bridge west of the existing bridge. Like Alternative EC-2, the existing bridge would be removed following construction of the replacement bridge. Exhibit 8 shows alignment of Alternative EC-1 and Exhibit 9 provides enlargements of the improvements that would be constructed under Alternative EC-1.

Like Preferred Alternative EC-2, the total Project construction cost for Alternative EC-3 is estimated to be \$300 million in 2019 dollars. Under Alternative EC-3, elements of the replacement bridge would be the same as the elements described for Alternative EC-2 except:

- **Alignment:** The main span of the bridge would be approximately 700 feet west of the existing lift span. The bridge terminus in White Salmon, Washington, would be located approximately 2,309 feet west of the existing SR 14/Hood River Bridge intersection, while the southern terminus would be in roughly the same location as the existing terminus at the Button Bridge Road/E. Marina Way intersection in Hood River, Oregon.
- **Type:** The bridge would be a 4,553-foot fixed-span segmental concrete box girder bridge with a concrete deck and no lift span. Like Preferred Alternative EC-2, the bridge would have 12 piers in the Columbia River and one land-based pier on the Washington shore.
- **Navigational clearance:** The navigational opening would be the same as Alternative EC-2, but the bridge would cross the navigation channel at a more skewed angle than under Alternative EC-2.
- **Roadway connections:** Connections to roadways would generally be the same as Alternative EC-2, but the bridge would connect to SR 14 on the Washington side at a new two-lane roundabout at the SR 14/Hood River Bridge/N. Dock Grade Road intersection west of the existing bridge. Access to S. Dock Grade Road would be provided via the driveway east of the Mt. Adams Chamber of Commerce and Heritage Plaza Park and Ride.
- **Bicycle and pedestrian connections:** Connections to bicycle and pedestrian facilities would generally be the same as Alternative EC-2, but the roundabout intersection with SR 14 on the Washington side would be located further west at N. Dock Grade Road.

Exhibit 8. Alternative EC-1 Alignment

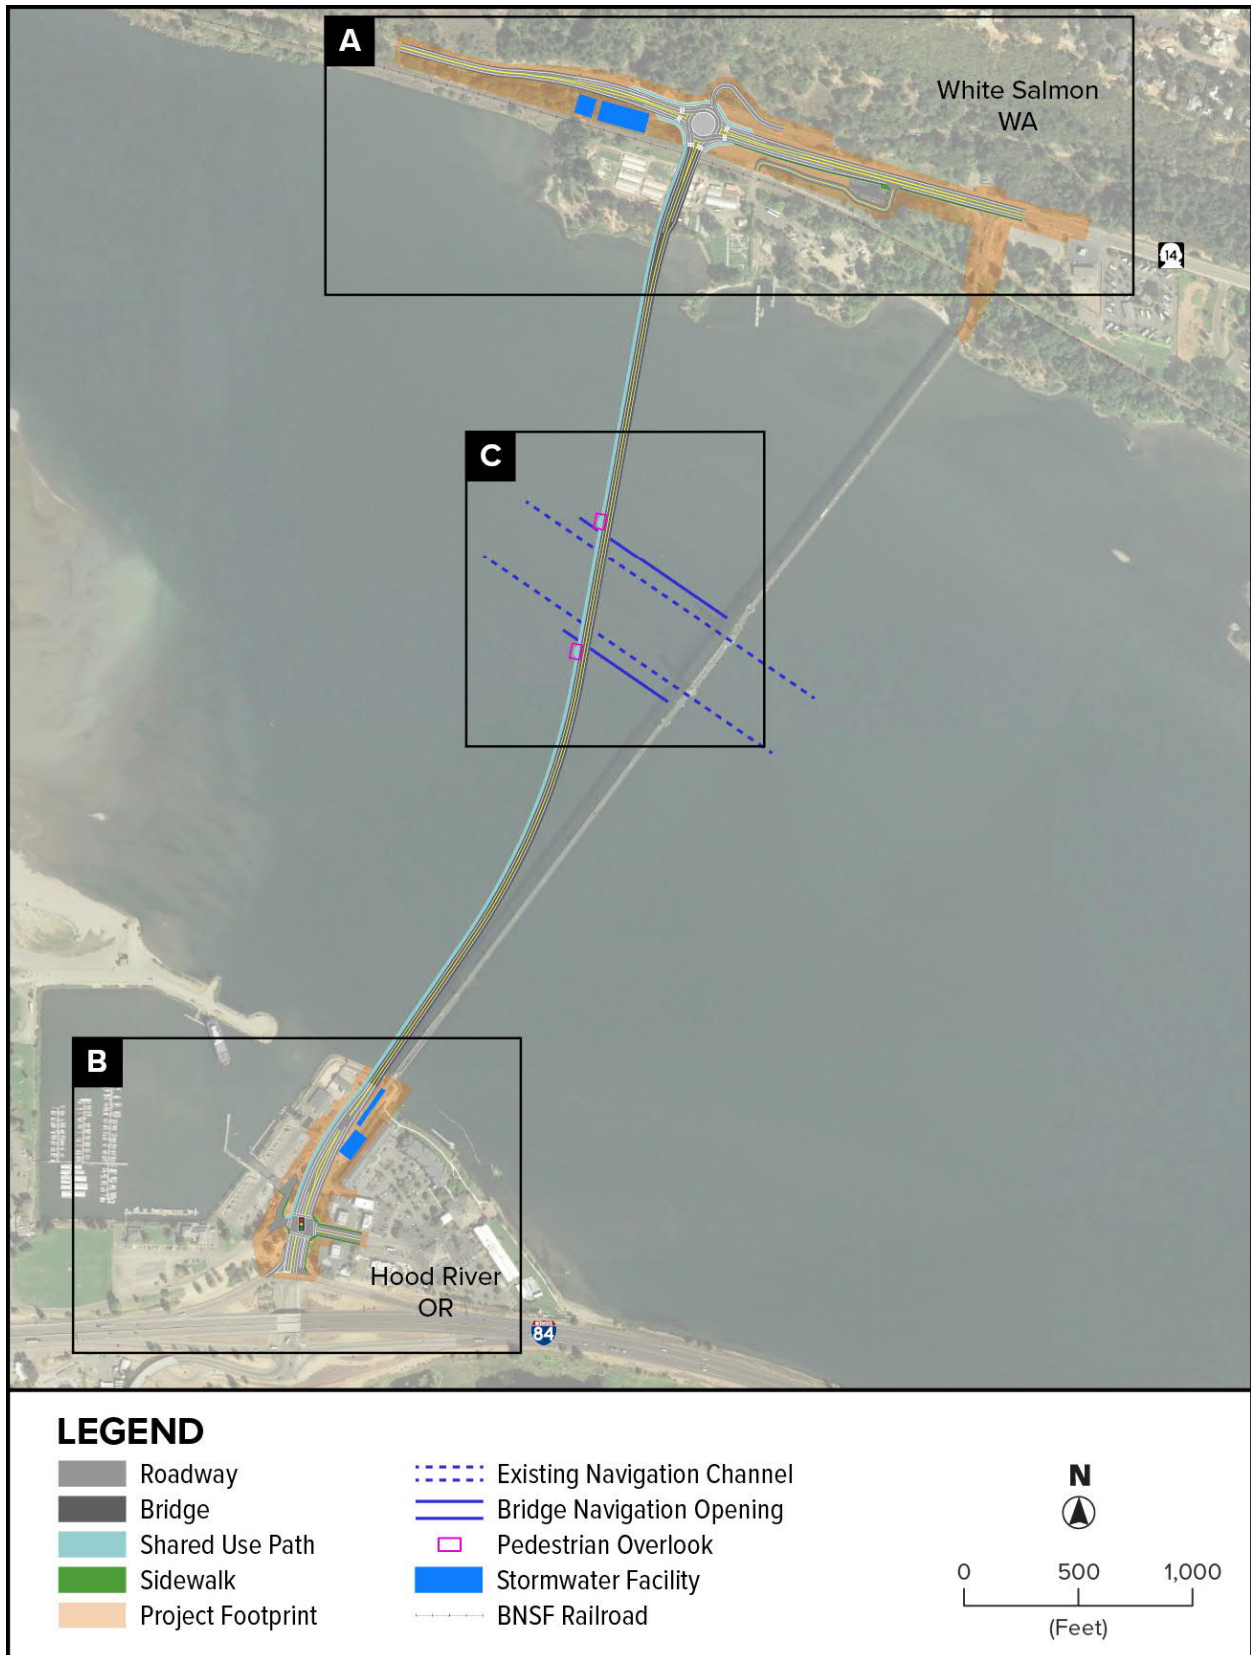

Exhibit 9. Alternative EC-1 Enlargements

- 1 New two-lane roundabout with marked crosswalks
- 2 New shared use path across bridge
- 3 New stormwater detention and water quality treatment facilities
- 4 Access to S. Dock Grade Road provided from eastern end of Heritage Plaza Park and Ride
- 5 Elimination of toll booth
- 6 New wider bridge navigation opening crosses navigation channel at a skewed angle

This page intentionally left blank.

2.4. Alternative EC-3

Alternative EC-3 would construct a replacement bridge east of the existing bridge. Like Alternative EC-2, the existing bridge would be removed following construction of the replacement bridge. Exhibit 10 shows alignment of Alternative EC-3 and Exhibit 11 provides enlargements of the improvements that would be constructed under Alternative EC-3.

Like Preferred Alternative EC-2, the total Project construction cost for Alternative EC-3 is estimated to be \$300 million in 2019 dollars. Under Alternative EC-3, elements of the replacement bridge would be the same as the elements described for Alternative EC-2 except:

- **Alignment:** The main span of the bridge would be approximately 400 feet east of the existing lift span. The bridge terminus in White Salmon, Washington, would be located approximately 140 feet east of the existing SR 14/Hood River Bridge intersection, while the southern terminus would be roughly the same as the existing terminus at the Button Bridge Road/E. Marina Way intersection in Hood River, Oregon.
- **Type:** The bridge would be a 4,553-foot fixed-span segmental concrete box girder bridge with a concrete deck and no lift span. Like Alternative EC-2, the bridge would have 12 piers in the Columbia River and one land-based pier on the Washington side of the river.
- **Roadway connections:** Connections to roadways would generally be the same as Alternative EC-2, but the bridge would connect to SR 14 on the Washington side at a new two-lane roundabout slightly east of the existing SR 14/Hood River Bridge intersection. On the Oregon side, improvements extend slightly further south to the Button Bridge Road/I-84 on and off ramps. The private driveway on Button Bridge Road north of E. Marina Way would be closed under this alternative.
- **Bicycle and pedestrian connections:** Connections to bicycle and pedestrian facilities would generally be the same as Alternative EC-2, but the roundabout intersection with SR 14 on the Washington side would be located approximately 264 feet further east than under Alternative EC-2.

Exhibit 10. Alternative EC-3 Alignment

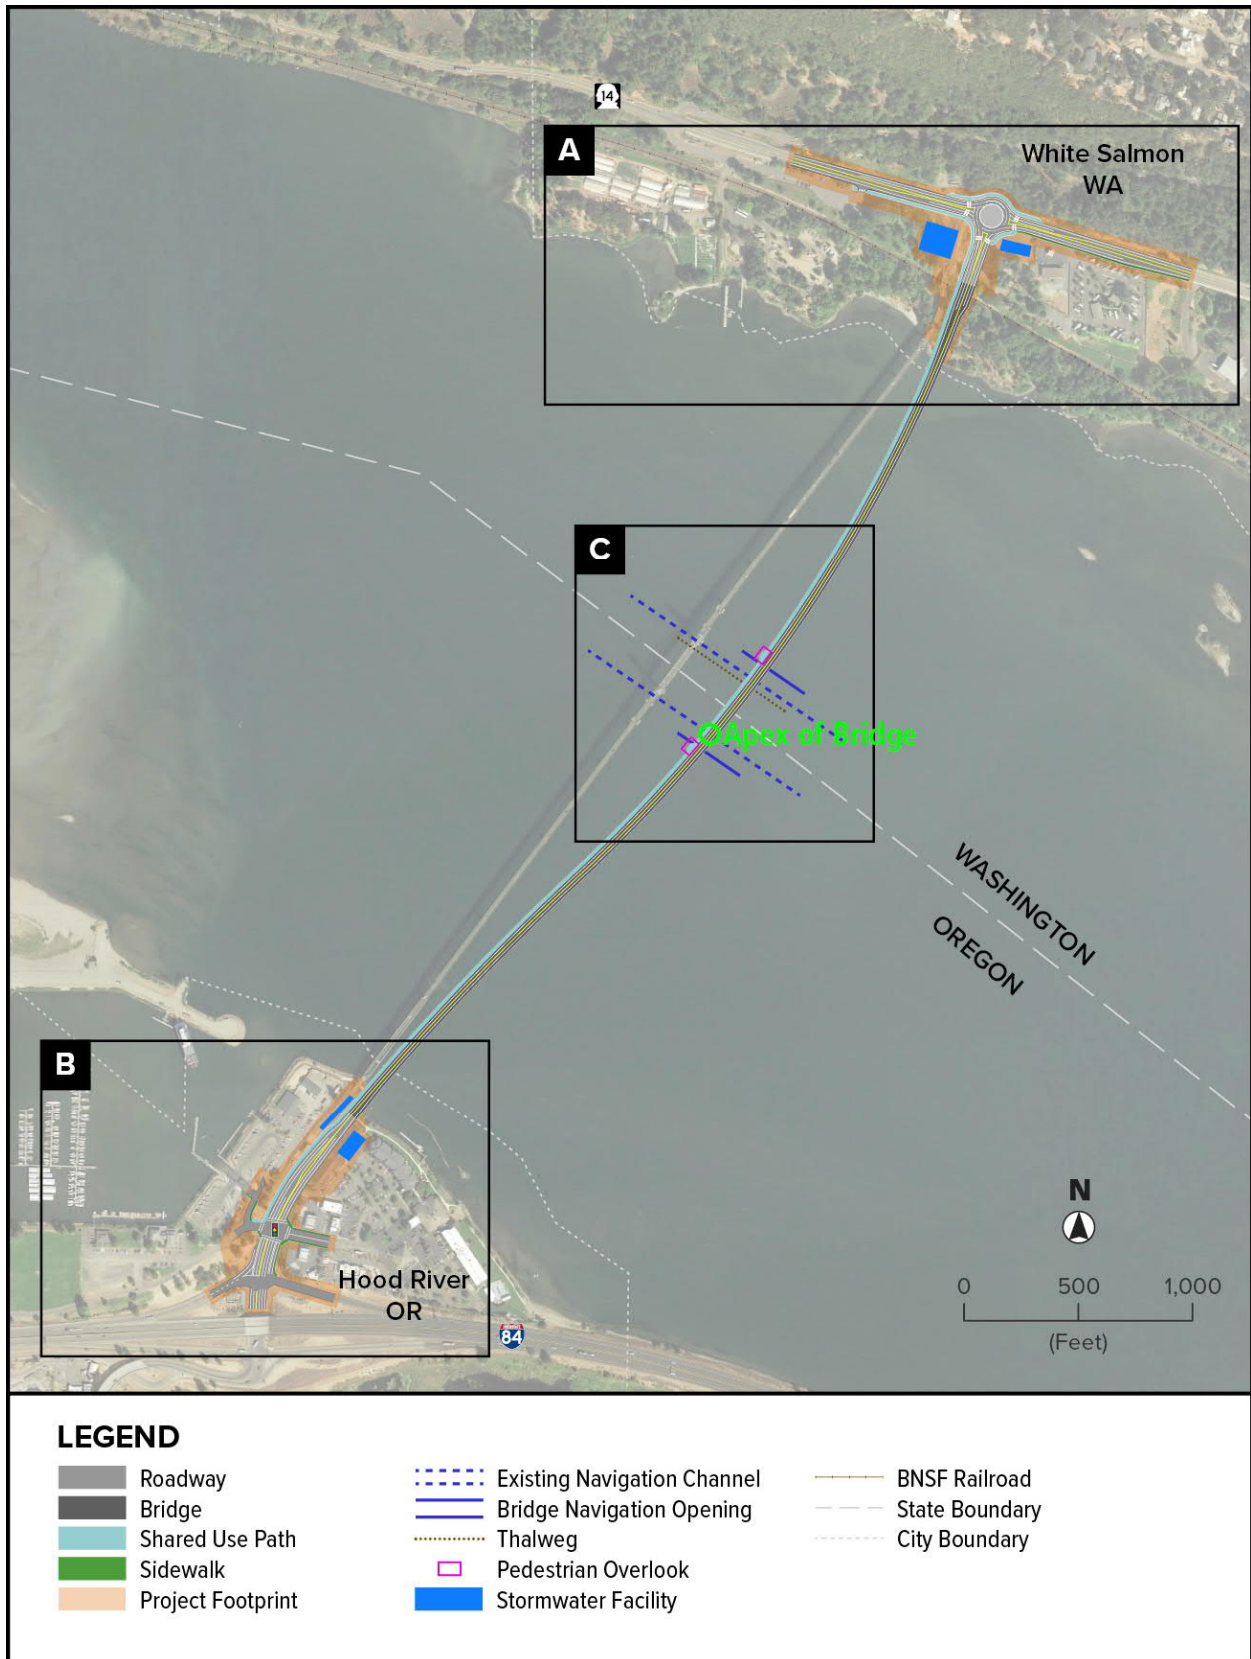

Exhibit 11. Alternative EC-3 Enlargements

- 1 New two-lane roundabout with marked crosswalks
- 2 New shared use path across bridge
- 3 New stormwater detention and water quality treatment facilities
- 4 Elimination of toll booth
- 5 New wider bridge opening crosses navigation channel at a perpendicular angle

This page intentionally left blank.

2.5. Construction of the Build Alternatives

Construction of the build alternatives would be similar in duration and approach.

- **Timeline and sequencing:** The NEPA process is anticipated to be complete in 2021; subsequent phases of the Project would be dependent on funding availability. Construction would take approximately 6 years and would require work during approximately six in-water work windows (IWWWs). Approximately three IWWWs would be necessary to construct the replacement bridge, and approximately three additional IWWWs would be necessary to complete the removal of the existing bridge.
- **In-water work window:** Certain construction and removal activities conducted below the OHWM of the Columbia River would be restricted to an IWWW established for the Project. The IWWW would be established in permits for the Project through inter-agency coordination including Washington Department of Fish and Wildlife (WDFW), Oregon Department of Fish and Wildlife (ODFW), NOAA Fisheries, and USFWS. Preliminary discussions with these agencies indicate that the authorized IWWW would likely be October 1-March 15 of each year. In-water work activities that would be restricted to this IWWW would include vibratory and impact pile installation, installation of drilled shaft casings, installation of cofferdams, and unconfined wiresaw removal of the existing pier foundations. Vibratory pile removal would not be restricted to the IWWW.
- **Mobilization and site preparation:** The contractor would likely mobilize equipment to the construction site via barges and trucks. Erosion control measures (e.g., silt fences, etc.) and debris containment devices (i.e., floating debris booms) would be installed and clearing and grubbing limits would be established prior to vegetation removal. Barges would require anchoring, tethering, and spudding.
- **Construction staging:** At least two staging areas would be necessary for staging and storage of materials and equipment; the location of these areas would be determined later in the design process, including obtaining all relevant environmental permits and land use approvals. It is estimated that a minimum of 2 acres would be necessary for staging and storage of materials and equipment. Materials arriving by barge may be offloaded to upland staging areas or may be temporarily stored on barges. All staging areas and equipment fueling areas would be located above the OHWM and outside of environmentally sensitive areas. Staging and temporary access areas will occur in upland locations, on areas that are either already disturbed or that will be restored post-Project.
- **Temporary work structures:** The Project would likely require the installation of several temporary in-water structures during construction and removal of the existing bridge. These structures would include temporary work bridges, cofferdams, drilled shaft casings, and temporary piles. These temporary features would be designed by the contractor after a contract is awarded, but prior to construction.

Three temporary work bridges would likely be installed to support construction activities. One temporary work bridge would be installed at each end of the replacement bridge alignment. A third temporary work bridge would be constructed on the Washington side of the river to support the removal of the existing bridge. These temporary structures would likely be supported by 24-inch steel pipe piles.

Additional temporary piles would be necessary throughout construction and removal of the existing bridge for a variety of purposes, including supporting falsework and formwork, pile templates, reaction piles, and for barge mooring. These temporary piles would also likely be 24-inch steel pipe piles.

Barges would be used as platforms to conduct work activities and to haul materials and equipment to and from the work site. Three barges would typically be needed at each pier during drilled shaft construction, and at least one barge would remain at each pier after shaft construction to support column and superstructure construction.

Temporary cofferdams would likely be installed to create isolated in-water work areas for certain activities. A temporary cofferdam would likely be installed to create an isolated in-water work area for construction of a spread footing foundation on the Washington shoreline. Sheet pile cofferdams may also be installed at one or more piers on the existing bridge to create an isolated work area for removal of the existing bridge foundations.

Drilled shaft shoring casings would also be installed as temporary work structures to create isolated work areas for drilled shaft construction. An outer steel casing, with a diameter approximately 12-inches larger than that of the finished drilled shaft, would be installed to act as an isolation structure. The outer cases will be 84 inches in diameter for the 72-inch shafts, and 108 inches in diameter for the 96-inch shafts.

- Work area isolation and fish salvage: To minimize impacts to fish, fish salvage measures would be employed to remove fish from temporarily isolated in-water work areas during and after the installation of drilled shaft shoring casings and cofferdams. Fish salvage would follow the best management practices (BMPs) established in the biological opinion for FHWA and ODOT's Federal Aid Highway Program programmatic consultation and would be supervised by a fish biologist. A fish biologist with the experience and competence to ensure the safe capture, handling, and release of all fish will supervise all fish capture and release. To minimize take, efforts will be made to capture ESA-listed fish known or likely to be present in an in-water isolated work area using methods that are effective, minimize fish handling, and minimize the potential for injury. Attempts to seine and/or net fish, or the use of minnow traps shall precede the use of electrofishing equipment. Isolation structures will be installed such that they will not be overtopped by high water. A reasonable effort would be made to re-locate threatened or endangered fish using methods that minimize the risk of injury.
- Bridge foundation installation: The foundations for the replacement bridge would consist of three different foundation types: 1) pile-supported foundations; 2) drilled-shaft-supported foundations; and 3) spread footings. In general, pile-supported foundations would be used at locations where the depths to bedrock are relatively deep (greater than 50 feet below ground surface) while drilled shaft-supported foundations would be more economical in locations where depths to bedrock are nearer to the surface (less than 50 feet below ground surface). Spread footings would be used where bedrock is located at or near the surface and deep foundations are not required.

Pile-supported foundations would be supported by 48-inch diameter steel pipe piles. The typical in-water foundation would require 25 piles, whereas smaller terrestrial pile-supported foundations would require fewer piles. Piles would be installed with a vibratory hammer to the extent practicable, as a means of minimizing impacts associated with underwater noise. An impact hammer would be used to drive the piles to the final tip elevation, and/or to proof the piles to verify load-bearing capacity.

Drilled shaft-supported foundations would be supported by either 72-inch-diameter drilled shafts or 96-inch-diameter drilled shafts. The larger-diameter drilled shafts would be used on the bents that flank the navigation channel. Installation of drilled shafts would be conducted by first oscillating an outer steel casing to a specified design depth. As the casing is being advanced to the design depth, soil would be removed from inside the casing using an auger and clamshell. Excavated soils would be temporarily placed onto a barge with appropriate containment and ultimately placed at an approved upland site. Once the interior of the casing has been excavated to the design depth, an interior steel casing of the finished diameter of the shaft would be installed. This casing would be installed either with an oscillator or vibratory hammer. Once the interior casing has been installed to final depth, a steel reinforcement cage would be installed within the casing, and the shaft would be filled with concrete.

Construction of spread footing foundations below the OHWM of the river would be conducted within a temporarily dewatered work area within a cofferdam. Once the cofferdam is installed and the work area established, formwork would be installed for the spread footing, steel reinforcing would be installed within the forms, and the concrete for the footing would be poured. The cofferdam would remain in place until the concrete is fully cured to allow the concrete to cure in a dewatered environment. Once the concrete for the footing is fully cured, the formwork would be removed followed by the temporary cofferdam.

- Bridge superstructure construction: Once the foundation piles and drilled shafts are installed, a concrete pile cap would be installed atop the shafts at the waterline, and the concrete pier and superstructure would be installed atop the pile cap. Pile caps may be either precast or cast-in-place.

The superstructure would consist of both precast and cast-in-place concrete segments. Additional finish work would also be conducted, including surfacing, paving, and installation of other finish features, such as striping and signage.

Work on the superstructure would be conducted either from the bridge deck, from the deck of temporary work bridges, or from barges. It is anticipated that the superstructure would be constructed using a balanced cantilever method that uses paired sets of form travelers to build outwards from each pier. It is assumed that a contractor may operate up to four pairs of form travelers at a given time to expedite the construction of the superstructure.

Many of the bridge superstructure components would be composed of precast concrete. Precast elements would likely include bridge columns, beams, girders, and deck panels. Precast bridge elements would be constructed in upland controlled environments and would be transported to the Project site by either barge or truck.

- Dismantling and removal of the existing bridge: The existing bridge would remain open until the replacement bridge is constructed and operational, at which point it would be dismantled and removed. This work would be conducted via barges and/or temporary work platforms and may require in-water isolation.

Removal of the superstructure would most likely be conducted by barge-mounted cranes. Removal of the superstructure would likely begin with removal of the counterweights, followed by the lift towers and the individual truss sections. The lift towers and truss sections would be cut into manageable pieces and loaded onto barges or trucks by a crane. Each section would then be either transported to an upland site for further dismantling or disposed of directly at an appropriately permitted upland facility.

Removal of the existing foundations would be conducted by one of the following two methods:

- Wiresaw removal to mudline, without a cofferdam. A diamond wire/wire saw would be used to cut the foundation into manageable pieces that would be transported to a barge and disposed of in a permitted off site upland location. The foundations would be removed to the mudline and the substrate would be naturally restored with surrounding sediments.
- Wiresaw or conventional pier removal techniques within a cofferdam. Conventional removal techniques consist of using a hydraulic ram to break the piers into rubble, and torches or other cutting methods to cut reinforcement. Materials would then be transported to a barge and disposed of in a permitted off site upland location. The foundations would be removed to the mudline and the substrate would be naturally restored with surrounding sediments.

It is assumed that the cofferdam removal option would be used at both piers that flank the navigation channel, but may also be used in other pier locations. At the two navigation channel piers, once cofferdams are installed and fish salvage has occurred, approximately 7,800 cubic yards of existing riprap would be removed. Riprap would be removed via a barge mounted clamshell, and loaded onto barges, and disposed of at an off-site permitted upland location. Once riprap has been removed, the existing piers would either be removed using one of the methods described above.

- Post-Project site restoration: Construction of the Project would result in temporary impacts to native and non-native vegetation on both the Oregon and Washington sides of the river. Areas temporarily disturbed during construction would be restored upon completion of the Project consistent with state and local regulations.

On the Oregon side of the river, most temporary disturbance would occur within areas that are either impervious or already developed. Temporary disturbance would occur within areas that consist of landscaping, lawns, or similar heavily managed vegetation. Post-Project site restoration in these areas would likely consist of replacement landscaping with similar ornamental species. No native plant communities would be disturbed on the Oregon side of the river.

On the Washington side of the river, vegetation would be cleared within temporary work zones to allow construction equipment to access the site, to construct the replacement bridge abutments and stormwater treatment facilities, and to remove the existing bridge. A portion of the area to be cleared would be within a forested riparian area that is within the 200-foot shoreline jurisdiction of the Columbia River, and is regulated by the City of White Salmon under its Shoreline Master Program (City of White Salmon 2016). A large oak tree that is present east of the existing bridge would be preserved and would not be affected.

Temporarily disturbed areas within ODOT and WSDOT rights-of-way would be replanted consistent with applicable ODOT and WSDOT requirements and design standards. Temporarily disturbed vegetation within the riparian shoreline buffer on the Washington side of the river would be conducted consistent with requirements in the City of White Salmon Critical Areas Ordinance (White Salmon Municipal Code Chapter 18.10) (and Shoreline Master Program (City of White Salmon 2016).

- Compensatory Mitigation: The Project would result in permanent impacts to wetland and aquatic habitats, and a compensatory mitigation plan would likely be required by federal, state

and local regulations to offset these permanent impacts. The compensatory mitigation plan would be developed during the permitting phase of the project. The mitigation plan would identify the amount, type, and specific locations of any proposed compensatory mitigation actions, specific impact avoidance and minimization measures to be implemented, as well as the goals, objectives, and performance standards for measuring success. Full implementation of the compensatory mitigation plan would be a condition of the applicable permits of the agencies with jurisdiction (i.e., USACE Section 404 permit, the Oregon Department of Environmental Quality [DEQ] and the Washington State Department of Ecology [Ecology] Section 401 permits, the Oregon Department of State Lands [DSL] Removal-Fill permit, WDFW Hydraulic Project Approval, and City of White Salmon Shorelines and Critical Areas permits), and the mitigation would comply fully with all applicable permit terms and conditions.

The method of delivery for Project final design and construction has not been determined at this time. Traditional delivery methods, such as design-bid-build, and alternative delivery methods, such as design-build and public-private-partnerships to name a few, will continue to be considered by the Port. As part of Oregon's HB 2017, the Port was provided legal authority by the state to enter into a public-private-partnership.

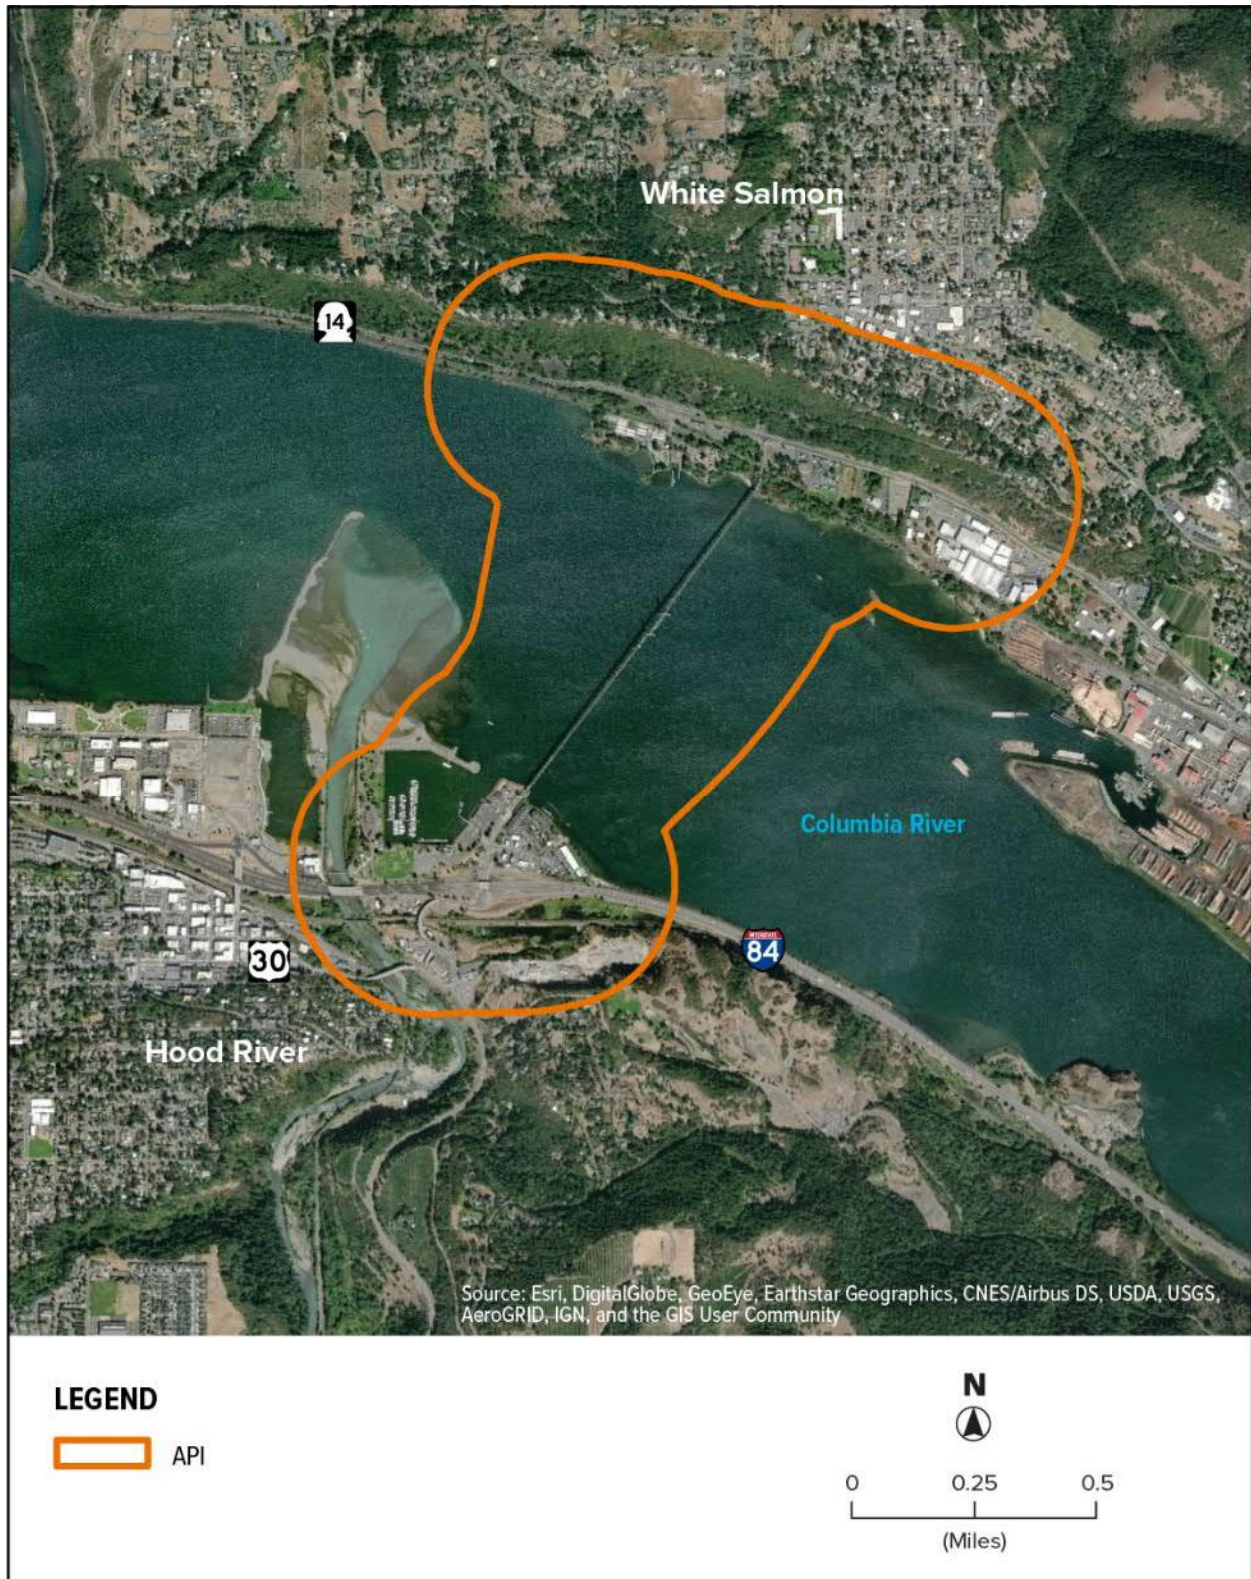

3. METHODOLOGY

Hazardous materials were previously analyzed in the Project's Draft EIS and Hazardous Materials Technical Report (Parsons Brinckerhoff 2003).

3.1. Area of Potential Impact

The area of potential impact (API) for the hazardous materials analysis is shown below in Exhibit 12. The API encompasses the area anticipated for direct and indirect impacts to hazardous materials resulting from construction and operation of the Project. As part of the collection of data from a commercial database provider to identify federal, state, and certain local records of potential contamination sources in the vicinity of the API, the standard regulatory records and search radius is ¼-mile from the edge to the API.

Exhibit 12. Hazardous Materials API

3.2. Regulations, Standards, and Guidelines

The federal, state, and local regulations, standards, and guidelines that are applicable to the Project's Hazardous Materials Technical Report are:

- American Association of State Highway and Transportation Officials' Special Committee on Environment, Archaeology and Historic Preservation, Hazardous Waste Guide for Project Development (1990)
- Federal Highway Administration's (FHWA) Hazardous Wastes in Highway Rights of Way (1994)
- FHWA's Supplemental Hazardous Waste Guidance (1997)
- U.S. Environmental Protection Agency's (EPA) Resource Conservation and Recovery Act (1976)
- EPA's Comprehensive Environmental Response, Compensation, and Liability Act (1980)
- Oregon Department of Transportation (ODOT) HazMat Program Procedures Guidebook
- Washington Administrative Code (WAC) 1998 State Environmental Policy Act WAC 197-11.

The methodology presented below is similar to a Phase I Environmental Site Assessment per American Society for Testing and Materials 1527-13; the report format follows the ODOT guidance for technical reports.

There have been no substantive changes in federal, state or local laws, regulations or policies that would significantly change the impact analysis approach for hazardous materials. Past review of government environmental databases is outdated. A new review of government environmental databases was conducted to determine if any new hazardous material sites exist in the API.

3.3. Sources of Existing Data

Previously collected and reviewed data describing historical land use and geologic and groundwater conditions was used to document data collection. These records included available historical aerial photographs, Sanborn Fire Insurance Maps, U.S. Geological Survey (USGS) Topographic Maps, and County Assessor records. An updated site screening review and risk analysis was conducted by performing the following research:

- Updated review of readily available information regarding geologic and groundwater conditions within the API to assess the potential for known or suspected contaminants to affect the Project. This includes the Washington State Department of Ecology (Ecology) and Oregon Water Resource Department well logs and Ecology and Oregon Department of Environmental Quality (DEQ) database information regarding known soil, sediment, and groundwater contamination sites within the API.
- Querying a commercial database provider to identify federal, state, and certain local records of potential contamination sources in the vicinity of the API.
- Review aerial photographs, topographic maps, assessor records, and other pertinent records that have been updated since 2003.

3.4. Data Collection or Development

Previous environmental reports of assessment and remediation at properties within the API were obtained online, from the Washington Department of Transportation (WSDOT) and ODOT, or other project parties including Ecology and the DEQ through in-person file reviews on high-profile sites. Any previously identified environmental conditions that are currently known to exist that may impact the Project, adequate documentation of environmental activities (e.g., assessment and remediation, future work plans, etc.) can be readily obtained from state agency websites.

A reconnaissance-level site visit was conducted within and immediately adjacent to the API. This site review is limited to features readily observed from publicly accessible areas and did not include entering or viewing conditions within buildings. The site visit was intended to field-verify the location of properties of concern that were identified from the updated regulatory database and historical records reviews. The site visit also included a visual survey to identify and record land uses likely to generate hazardous materials, such as agriculture or industrial, and the presence of other environmental conditions which have the obvious potential to affect the API.

3.5. Impact Analysis Techniques

The impact analysis was assessed in two steps to confirm if impacts previously identified are still valid and identify any new impacts. The first step evaluated the API for known or possible hazardous materials contamination (existing conditions), areas of impact, and standard mitigation measures to avoid or manage the impacts. The second step evaluated project-specific impacts and mitigation measures and determined appropriate cost estimates.

The compiled information was reviewed and evaluated using a logical screening methodology to eliminate sites that pose little to no risk and did not warrant further investigation. The remaining validated sites were evaluated to document those that may affect the environment during construction, create substantial construction impacts, and incur cleanup liability.

A risk level was determined to rank the site with respect to: 1) the site's likelihood that it will impact the Project, and 2) the complexity of that impact (e.g., localized versus widespread soil, sediment, or groundwater contamination).

3.5.1. Construction Impacts

The sites of concern identified during the site screening process, which includes consideration of sites identified in the previous assessment, were evaluated for the type of impact (standard or project-specific) to the environment, construction, or liability. If project-specific construction impacts are present (e.g., generation of contaminated soil or groundwater during construction), potential site-specific mitigation options to avoid and/or minimize each identified impact were presented. This required consideration of the Project construction footprint, maximum excavation depths, designs, and techniques. The findings and conclusions were documented and, if warranted, provided recommendations and estimated costs for additional assessment for specific properties that may affect the Project. For example, sampling may be recommended where excavation may encounter soil contamination.

Known locations of contaminated soil and groundwater that would be encountered during construction would need to be removed, properly handled, and disposed of prior to or during construction. In addition, procedures would need to be developed in the case unanticipated contamination is encountered during construction.

3.5.2. Direct Impacts

Portions of acquired properties that have identified contamination but are not within the Project's construction footprint, may have un-remediated contamination due to project cost constraints. If the Project chooses to retain possession of the entirety of these properties, restrictive covenants regarding redevelopment would likely need to be applied to the entire property. The restrictive covenants would be filed with the respective agency depending on the location of the property. Prior to entering into a restrictive covenant with the local regulatory agency, the Project should understand that restrictive covenants may interfere with future design and construction elements. The future implications of restrictive covenants may result in the Project reconsidering property acquisitions. If the Project chooses to dispose of the unused portions of the properties, they would have to be partitioned and sold as contaminated property. This would negatively affect the value of the property and could diminish the likelihood of a sale due to difficulty of potential buyers to obtain financing.

3.5.3. Indirect Impacts

Indirect impacts could include reduction in landfill capacity due to excavation and disposal of known and unknown contamination within the Project footprint.

3.6. Agency Coordination

Local regulatory agencies will be invited to provide comments to this methodology and Hazardous Materials Technical Report.

4. AFFECTED ENVIRONMENT

4.1. Geology

The project area is within the steep-walled Columbia River Gorge, composed of layers of Miocene basalt. These flows spilled into ancient Columbia River canyons multiple times, each time changing its course. More recently, the Cascade Mountains uplifted and folded the basalt flows. The Columbia River cut through these flows as they uplifted. During the last ice age, catastrophic flooding carved the steep-walled Columbia River Gorge and created enormous depositional features. More recent alluvial and erosional materials were then deposited.

4.2. Soils

The soils on the Washington side of the Project (where present) are silt loams formed in loess and materials weathered from the basalt cliffs above. These soils are moderately deep and well drained, although when wet they have a slow infiltration rate. Runoff potential is moderate. Very little fill is present on the Washington side. The soils on the Oregon side of the Project are composed of xerofluvents formed in recently deposited alluvium from Hood River outwash. These soils are generally well drained and permeable with only slight erosion hazard. Extensive fill material has been placed over top of these soils.

4.3. Groundwater

Groundwater elevations on the Washington side of the Project were investigated through a review of Ecology water well records within and in the vicinity of the API. In general, usable groundwater elevations come from deep wells terminated in basalt formations at depths greater than 400 feet below ground surface. Shallow wells terminated at depths less than 150 feet below ground surface have static water levels ranging from 22 to 42 feet below ground surface. Based on the local topography and proximity of surface water bodies, local groundwater flow is presumed to be to the south. However, local subsurface geologic and manmade features can affect groundwater flow; therefore, this groundwater flow interpretation is only an estimate based on surface observations. The City of White Salmon, Washington, has a municipal water system that draws water from Buck Creek (surface source) and two deep groundwater wells which pump from the Grand Ronde Aquifer. The wells are located 4 miles north of the City of White Salmon, west of SR 141. The Buck Creek intake is located 8 miles up Buck Creek road off SR 141. The City of White Salmon does not use local groundwater for municipal water; however, there are individual well water users within the API. One well at the Bridge RV Park and Campground is used for irrigation purposes only.

Groundwater elevations on the Oregon side of the Project were investigated through a review of water well records within and near the API filed with the Oregon Water Resources Department. These water well records indicate that shallow wells terminated at depths less than 30 feet below ground surface have static water levels ranging from 5 to 15 feet below ground surface. Based on the local topography and proximity of surface water bodies, local groundwater flow is presumed to be to the north. However, local subsurface geologic and manmade features can affect groundwater flow; therefore, this groundwater flow interpretation is only an estimate based on surface observations. The City of Hood River obtains its drinking water supply from three springs located 15 miles southwest of the city near Lost Lake and does not use local ground water.

4.4. Environmental Records Review

A regulatory data search was conducted consistent with standard guidance established by the American Society for Testing and Materials, FHWA, WSDOT, and ODOT. Environmental Data Resources, Inc. (EDR) was contracted to provide a comprehensive search of existing environmental regulatory agency databases for known or suspected sites of environmental concerns within the API. The EDR Report includes a list of databases searched, a statistical profile indicating the number of properties within the API, selected detailed information from federal and state lists, and maps illustrating the identified sites of interest or concern within the API. One EDR Report was used for this technical report entitled EDR Radius Map Report with GeoCheck, Hood River Bridge, Hood River, Oregon, Inquiry Number 5622424.2s (EDR 2019c). Identified sites of environmental concern are located on focus maps provided by EDR. See Appendix A for the EDR Report.

The search of publicly available federal, state, and local environmental databases for information on sites, includes but is not limited to the following operations:

- Location of registered underground storage tanks and leaking underground storage tanks
- Facilities that use, generate, treat, store, or dispose of hazardous wastes and/or substances
- Transporters of hazardous wastes
- Solid waste landfill locations
- Unauthorized spills and releases of hazardous/regulated substances
- Sites undergoing investigations and/or cleanup

See the EDR Report in Appendix A for a complete list of environmental databases searched for this project.

4.4.1. Environmental Database Analysis

Twenty-six (26) sites of environmental concern were identified in the EDR Report and had adequate and complete address information to specifically locate on EDR Report maps. Nineteen (19) sites were reported with inadequate or incomplete address information, were not specifically located on maps, and were mostly related to spill sites for vehicles or vessels.

Sites of environmental concern identified during the environmental database search are screened to determine their potential to impact the Project. The base screening criteria takes into consideration the nature of the database listing (e.g., the occurrence or potential for a contaminant release) and the distance of the listed site from the Project build alternatives. After the base screening criteria is applied, sites are further evaluated by reviewing the site-specific information provided in the database report to assess the potential for a site to adversely impact construction (e.g., small spill, soil contamination only, case closed, etc.). Following the application of the screening criteria, sites are either no longer considered to impact the Project build alternatives or recommended for further evaluation including field reconnaissance and, if necessary, regulatory file review.

Exhibit 13 provides detail on the 26 sites that the EDR Report identified with specific locations and the distance and direction from each build alternative. The environmental database listing for each site of environmental concern is identified in Appendix A.

Exhibit 13. Distance and Direction of the Sites of Environmental Concern

* = Sites continuing to present a low risk of concern (see Exhibit 14)

Sites have been eliminated from further consideration based the following criteria: distance from the Project area, no reported releases, and sites were cleaned or cases were closed. Of the 26 sites listed in Exhibit 13, six continue to present a low risk of concern to the Project build alternatives as described in Exhibit 14 and shown relative to the API in Exhibit 15. The remainder of the 20 sites with specific locations were reviewed and eliminated from further consideration due to either no releases to the environment reported or the site has been cleaned and has documentation no further action on file with either Ecology or DEQ.

Exhibit 14. Sites of Environmental Concern to the Project

Site	Identification Number on Exhibit 15	Risk Description
Washington		
Northwest Pipeline ST White Salmon Northwest Pipeline ST Hood River SR 14 Bingen, WA 98605 0.01 mile north of Alternative EC-2 0.44 mile east of Alternative EC-1 0.02 mile west of Alternative EC-3	1	The site is a gas pipeline meter station, formerly including mercury-containing equipment. Removal actions and cleanups of mercury-containing soil occurred in 1991 and 2007. Although Ecology has determined that the site does not pose a threat to human health and the environment, these pipeline meter stations may need to be relocated based upon the roundabout configuration associated with Alternative EC-2. There is a low risk for construction activities to encounter residual mercury contamination in soil.
Town Pump Gas Station 521 E. Jewett Blvd., White Salmon, WA 98672 0.45 mile northeast of Alternative EC-2 >0.50 mile northeast of Alternative EC-1 0.45 mile northeast of Alternative EC-3	2	The site has residual petroleum contaminated soils that have not been remediated to Ecology's clean-up standards under WAC 173-340-740(6)(f). The risk to the Project from this site is low due to its distance from the Project build alternatives.
Heidis Gas & Deli - Panelog 320 E. Jewett Blvd., White Salmon, WA 98672 0.40 mile north of Alternative EC-2 >0.50 mile northeast of Alternative EC-1 0.40 mile northeast of Alternative EC-3	3	The site has residual petroleum contaminated soils that have not been remediated to Ecology's clean-up standards under WAC 173-340-740(6)(f). The risk to the Project from this site is low due to its distance from the Project build alternatives.

Site	Identification Number on Exhibit 15	Risk Description
Oregon		
<p>Mt. Hood Railroad Company 110 Railroad Ave., Hood River, OR 97031 0.40 southwest of Alternative EC-2, Alternative EC-1, and Alternative EC-3</p>	4	<p>This site has been identified by DEQ's Site Assessment Program as a high priority for a preliminary assessment with sampling. Contaminants of concern include petroleum products, including gasoline, diesel, and heavy oils (lubricating oils and waste oil), solvents, herbicides/pesticides, and asbestos. The risk to the Project from this site is low based upon no significant spills or releases having been reported by Mt. Hood Rail Company and due to its distance from the Project build alternatives.</p>
<p>Mobil Oil Bulk Plant 2680 Dock Road, Hood River, OR 97031 0.15 southwest of Alternative EC-2, Alternative EC-1, and Alternative EC-3</p>	5	<p>A soil and groundwater investigation in 2008 confirmed the presence of petroleum contamination in the soil and groundwater for this site. DEQ has recommended that additional investigation and remedial actions be performed for this site. The risk to the Project from this site is low due to its distance from the Project build alternatives.</p>
<p>Carson Oil Company 2660 Dock Road, Hood River, OR 97031 0.10 southwest of Alternative EC-2, Alternative EC-1, and Alternative EC-3</p>	6	<p>This site has been identified by DEQ's Site Assessment Program as a high priority for a preliminary assessment with sampling. Contaminants of concern include petroleum products including gasoline, diesel, and heavy oils (lubricating oils and waste oil). The risk to the Project from this site is low based upon no significant spills or releases having been reported by Carson and due to its distance from the Project build alternatives.</p>

Exhibit 15. Sites of Environmental Concern to the Project

4.5. Historic Site Conditions

Historic site conditions of the API were evaluated by reviewing readily available information including historic topographic maps and aerial photographs. Sanborn fire insurance maps were requested, but not available for the API. To identify potential sites of environmental concern not included in the EDR Report, available information from historical mapping and aerial photography was reviewed to identify sites that had operations with potential environmental concerns. Historical research efforts developed an understanding of the types of land uses that existed within the API, hazardous materials historically associated with these land uses, and potential waste streams from these land uses.

An inventory of historical land use was compiled using U.S. Geological Survey Maps for White Salmon, Washington, years 1978 and 1994 and Hood River, Oregon, years 1979 and 1994. Aerial photographs from 1935 to 2017 were reviewed to determine document changes to land use. Results of the historical research are summarized in this section and in the text of this report as appropriate.

A review of historical maps and photographs identified a general trend of increased development from past maps to more recent maps. The Hood River Bridge appears on all maps and aerial photographs. Railroad grade is present on both the Washington and Oregon sides of the Columbia River on all maps and aerial photographs. As shown on historical sources, the alignment of the Hood River Bridge has not changed since being built in 1924 except for the northern terminus. Other modifications to the approach span on the Oregon side as well as changes to the Hood River Marina are also identified.

In 1935, prior to the completion of the Bonneville Dam and the subsequent flooding of the Columbia River to its current pool depth, the bridge was in its current configuration except for the landing points. The connection to SR 14 with the Hood River Bridge is to the west of its current connection near the current intersection of N. Dock Grade Road and SR 14. There is substantially more available shoreline on the north and south sides of the Columbia River as evident by the location of the lift span of the Hood River Bridge relative to the north shoreline, which is much closer to the lift span than in the current condition. The Port marina facilities had not been constructed. The Carson Oil Company facilities had been constructed in the City of Hood River.

In 1947 the Bonneville pool reached its current depth and the landings at both the City of White Salmon and City of Hood River sides are consistent with the current configurations. Land uses near the bridge connection with SR 14 in the City of White Salmon were primarily agricultural. In Oregon, land on either side of the approach to the Hood River Bridge was undeveloped and the area east of the bridge approach appears to be a lagoon.

In 1952 the Washington side remained largely unchanged while the Oregon side shows the construction of the I-84 interchange with Button Bridge Road. Lagoon areas east and upstream of the bridge approach are beginning to be filled in to accommodate the interchange and I-84. West of Button Bridge Road is undeveloped with respect to marina facilities.

In 1955 the Washington side remained largely unchanged while the Oregon side shows the continued construction of the I-84 interchange with Button Bridge Road, including the I-84 bridge over Hood River.

By 1973 the Washington side shows land clearing around the current Bridge Mart gas station. The Oregon side shows the current alignment of I-84 and the current interchange with Button Bridge Road. The commercial development area along E. Marina Way has been constructed as well as the Port marina and portions of the E. Port Marina Drive street network.

Other uses within the Project area appear to be similar to current conditions, including uses adjacent to the northern side of the Columbia River in the town of Bingen, Washington, dating back to at least 1957. The 1978 topographic map is the first map source reviewed that identifies the backfilled area along the Oregon shoreline within the API. The 1978 topographic map also identifies structures within the area of backfill. Specific land uses are not discernable at the level of detail of these historical sources.

The 1981 U.S. Department of Agriculture color infrared aerial photograph shows increased development adjacent to SR 14 on the Washington side. On the Oregon side, the full build-out of the marina facilities and the E. Port Marina Drive street network are clearly visible.

Between 1984 and 1990 the only significant change in land use was the construction of the Best Western Hotel and the Riverside Suites east of Button Bridge Road on the Oregon side. After 1990, the only major change was the construction and operation of the Bridge RV Park along SR 14, which was present in the 1990 aerial photograph. Subsequent aerial photographs identify the API including the Hood River Bridge and adjacent lands in approximately the same condition and level of land use as they appeared at the time of site reconnaissance for this Project. It is important to note that the aerial photograph from 2002 shows several areas of scattered debris and storage along the shoreline of the Vanguard Nursery property, which is accessed from S. Dock Grade Road along the south side of SR 14.

Information obtained from the Southwest Washington Regional Transportation Council (RTC) identified potential hazardous material located around the former City of Bingen and City of White Salmon docks. The location of these docks are on the submerged portions of the properties currently owned by Vanguard Nursery and Columbia River Treaty Fishing Access Site. Potential hazardous materials may have resulted from activities associated with the use of these docks in the late 1800s (RTC 2003).

4.6. Data Validation

Based on the results of the EDR Report and historical background analysis, electronic files from the EPA, Ecology, and DEQ were reviewed. The focus of the review was to identify sites that may have not been correctly identified within the EDR Report or may not have included the most updated information regarding current environmental conditions within the API.

Electronic files from EPA, Ecology, and DEQ did not identify any additional sites of environmental concern to the Project area. However, additional site investigation work by Ecology and DEQ since the publishing of the Draft EIS has determined that six sites could still pose a risk to the Project (Exhibit 14). At the time of the writing of the 2003 Hazardous Materials Technical Report, these six sites were reviewed and eliminated from further consideration as a risk to the Project in the Draft EIS.

4.7. Field Reconnaissance

Field reconnaissance activities were performed on May 6 and 7, 2019. Areas in the API on the Washington side include areas of undeveloped land from SR 14 to the Washington shoreline, a Bridge Mart Service Station, the Bridge RV Park and Campground, and WSDOT Park and Ride along SR 14. The tribal treaty fishing rights site is located between the alignments of Alternative EC-1 and Alternative EC-2 along the south side of SR 14. The Vanguard Nursery property is located west of the tribal treaty fishing rights site and is accessed from S. Dock Grade Road along the south side of SR 14. A Northwest Pipeline natural gas meter site is located to the immediate north of the existing intersection of the Hood River Bridge with SR 14. The BNSF Railway tracks approximately parallel the river south of SR 14.

Areas in the API on the Oregon side are primarily commercial development to the east and recreational facilities to the west. The Riverside multi-unit office building and Shell and Chevron Service Stations are directly adjacent to the existing alignment to the east. Businesses located further east include two restaurants and three Best Western hotel buildings and associated parking lot. A boat dock extends into the Columbia River running parallel to the shoreline upstream of the existing bridge. I-84 and the I-84 off- and on-ramps are located to the south of the API. The western portion of the API includes the Port headquarters building, associated parking lots, a public boat launch, fuel dock operated as a concession by the nearby Shell Service Station (with water and pump-out station), E. Port Marina Drive, roadside landscaping, and a fenced-in area with several pad-mounted transformers. Further west is the Hood River Marina, and Port Marina Park. The Waterfront Trail is also located on the shoreline running under the existing bridge. The existing toll booth station is located on the south approach ramp to the Hood River Bridge.

5. ENVIRONMENTAL CONSEQUENCES

5.1. No Action Alternative

5.1.1. Direct Impacts

The proposed Hood River Bridge would not be constructed under this alternative; direct and operational impacts related to hazardous materials are not expected.

If a catastrophic event occurred such as an earthquake, landslide, or barge or vessel strike, the bridge could be damaged or collapse into the river. Direct impacts from a catastrophe could include release of hazardous materials such as lead-based paint chips from the bridge, asbestos and hydraulic fluids entering the water from bridge infrastructure, as well as the potential that all or part of the bridge superstructure could fall into the Columbia River.

5.1.2. Indirect Impacts

While the existing bridge is in operation, spills of hazardous materials resulting from vehicle accidents on the bridge deck could potentially enter the Columbia River through the steel grate deck. Spills of hazardous materials resulting from vehicular accidents would be less likely to occur along the existing bridge with the No Action Alternative when the crossing is closed to vehicular traffic. However, it is possible that spills of hazardous materials resulting from vehicular accidents would be more likely to occur along alternative routes that function as detour routes during bridge closure with the No Action Alternative than with Alternative EC-2, Alternative EC-1, and Alternative EC-3.

5.2. Preferred Alternative EC-2

5.2.1. Construction Impacts

Potential hazardous material impacts related to construction of Alternative EC-2 are those conditions or actions that result in an adverse impact to human health and the environment. Construction of Alternative EC-2 would potentially impact areas where historic and current land use has included the use, generation, storage, release, or disposal of hazardous materials and petroleum products. Specific areas with potential hazardous materials impacts have been identified based on historic and current land use. Impacts are related to contained hazardous materials, demolition of existing structures and construction in areas of potential soil, sediment, and/or ground water contamination. Northwest

Pipeline meter station with historic mercury contamination has been identified as a specific area of hazardous materials impacts for this alternative. Mercury-contaminated soils may be encountered for this alternative that would require cleanup during project construction.

The Alternative EC-2 alignment crosses directly over the BNSF Railway tracks located on the Washington side of the Columbia River. Construction activities over water (at pier locations) and near the former City of Bingen and City of White Salmon docks (now currently submerged portions of the properties containing the Columbia River Treaty Fishing Access Site) may encounter hazardous materials and areas of contaminated soil, sediment, and/or groundwater. It is possible that hazardous materials have been spilled along the railroad grade during operation.

Several pole-mounted transformers containing mineral insulating oil are located along SR 14. These transformers may need to be moved for construction of this alternative. If the pole mounted transformers along SR 14 containing mineral insulating oil are not handled correctly, PCBs could be released into the ground or water.

Potential environmental issues would be associated with asbestos and/or lead based paint located within the existing bridge, tollbooth and associated equipment shed during demolition. A bridge demolition plan has not been prepared. Potential impacts resulting from the bridge demolition would need to be addressed through a bridge demolition plan. In addition to encountering hazardous materials, there would be the potential for accidental spills of hazardous materials during construction. Relatively small quantities of fuels (including diesel, gasoline, and propane) for various pieces of small equipment would likely be stored at a construction staging area. Concrete would also be poured to connect new bridge segments. There would be the potential for accidental spills of these materials with a risk of polluting the waterway or ground.

No impacts related to hazardous materials are anticipated for construction on the Oregon side of the API.

5.2.2. Direct Impacts

Direct impacts related to hazardous materials are not expected for this alternative. Operation impacts for this alternative include possible releases of hazardous materials (e.g., fuel spills during vehicle accidents, bridge maintenance). Spills would also have the potential to contaminate the stormwater water quality facilities should hazardous materials migrate off the bridge.

5.2.3. Indirect Impacts

No indirect impacts are expected to be associated with hazardous materials for this alternative.

5.3. Alternative EC-1

5.3.1. Construction Impacts

The Alternative EC-1 alignment crosses directly over the Vanguard Nursery property and BNSF Railway tracks located on the Washington side of the Columbia River. Construction activities over water (at pier locations) and near the former City of Bingen and City of White Salmon docks (now currently submerged portions of the properties containing the nursery and Columbia River Treaty Fishing Access Site) and railroad line may encounter hazardous materials and areas of contaminated soil, sediment, and/or groundwater. It is possible that hazardous materials have been spilled along the railroad grade during operation.

Potential environmental issues may be associated with the use of pesticides, fertilizers, and insecticides at the nursery property. Unidentified pole- or pad-mounted transformers containing mineral insulating oil may be located within the nursery property along the Alternative EC-1 alignment. These transformers may need to be moved for construction of this alternative.

Construction impacts related to bridge demolition resulting from Alternative EC-1 would be the same as Alternative EC-2.

No impacts related to hazardous materials are anticipated for construction on the Oregon side of the API.

5.3.2. Direct Impacts

Direct impacts resulting from Alternative EC-1 would be the same as Alternative EC-2.

5.3.3. Indirect Impacts

No indirect impacts are expected to be associated with hazardous materials for this alternative.

5.4. Alternative EC-3

5.4.1. Construction Impacts

The Alternative EC-3 alignment crosses directly over the BNSF Railway tracks located on the Washington side of the Columbia River. Construction activities over water (at pier locations) may encounter hazardous materials and areas of contaminated soil, sediment, and/or groundwater. It is possible that hazardous materials have been spilled along the railroad grade during operation. Several pole-mounted transformers containing mineral insulating oil are located along SR 14. These transformers may need to be moved for construction of this alternative.

Construction impacts related to bridge demolition resulting from Alternative EC3-3 would be the same as Alternative EC-2.

No impacts related to hazardous materials are anticipated for construction on the Oregon side of the API.

5.4.2. Direct Impacts

Direct impacts resulting from Alternative EC-3 would be the same as Alternative EC-2.

5.4.3. Indirect Impacts

No indirect impacts are expected to be associated with hazardous materials for this alternative.

5.5. Summary of Impacts by Alternative

Exhibit 16 provides a comparison of anticipated hazardous materials impacts by alternative.

Exhibit 16. Summary of Hazardous Materials Impacts by Alternative

Impacts	No Action Alternative	Preferred Alternative EC-2	Alternative EC-1	Alternative EC-3
Construction Impacts	<ul style="list-style-type: none"> • None 	<ul style="list-style-type: none"> • Potential contaminated sediments along the submerged lands of the Columbia River • Potential hazardous materials within the railroad right-of-way • Potential hazardous materials as part of bridge and tollbooth demolition • Potential for hazardous material spills to water or ground • Northwest Pipeline meter station 	<ul style="list-style-type: none"> • Potential hazardous materials at the nursery and submerged docks • Potential contaminated sediments along the submerged lands of the Columbia River • Potential hazardous materials within the railroad right-of-way • Potential hazardous materials as part of bridge and tollbooth demolition • Potential for hazardous material spills to water or ground 	<ul style="list-style-type: none"> • Potential contaminated sediments along the submerged lands of the Columbia River • Potential hazardous materials within the railroad right-of-way • Potential hazardous materials as part of bridge and tollbooth demolition • Potential for hazardous material spills to water or ground
Direct Impacts	<ul style="list-style-type: none"> • None 			
Indirect Impacts	<ul style="list-style-type: none"> • Spills could continue to discharge directly to the Columbia River • Spills may occur on alternative routes after closure of the bridge 	<ul style="list-style-type: none"> • Spills would no longer discharge directly to the Columbia River • Spills could migrate off the bridge into stormwater facilities 		

6. AVOIDANCE, MINIMIZATION, AND/OR MITIGATION MEASURES

6.1. Construction Impacts

The following measures would be implemented by the bridge owner to avoid, minimize, or mitigate construction impacts to hazardous materials:

- Characterize soil, sediment, and groundwater conditions within and adjacent to the alignment prior to construction, and remediate, if necessary. This includes the characterization of soil, sediment, and groundwater at pier locations within the Columbia River because of historic industrial uses along the Columbia River.
- Arrange with utilities to remove and relocate transformers, as necessary, along the alignment.
- Arrange with Northwest Pipeline company to relocate the natural gas metering station (Alternative EC-2 only).
- Conduct pre-removal surveys for asbestos, PCBs, and lead for the existing bridge and all other structures to be removed. If necessary, proceed with removal and disposal in accordance with regulations prior to removal of the existing bridge. Prepare pollution prevention plans and hazardous materials containment plans in accordance with WSDOT Standard Specification Section 1-07.15(1) "Spill Prevention, Control and Countermeasures Plan," and ODOT Standard Specification Section 00290.29(g) "Spills and Releases" and Section 00290.30 "Pollution Control."
- Wash-water from concrete delivery trucks, pumping equipment, and tools will also be similarly (impervious basins) contained. Treated equipment entering state waters (including barges, boats, cranes, etc.) would be maintained to prevent any visible sheen from petroleum products from appearing on the water's surface. No oil, fuel, or chemicals would be discharged into the Columbia River. Fuel hoses, oil drums, oil or fuel transfer valves and fittings, etc. would be checked regularly for drips or leaks; they would be maintained to prevent spills. Concentrated waste or spilled chemicals would be removed from the site and disposed of at a facility approved by Washington Department of Ecology, Oregon Department of Environmental Quality, or the appropriate county health department.
- Spills into the Columbia River, or onto land, with a potential to enter the water would be reported immediately to relevant agencies including U.S. Environmental Protection Agency, U.S. Coast Guard, Oregon Department of Environmental Quality, and Washington State Department of Ecology. Emergency spill control equipment would be on-site at all times. If a spill occurs, containment and clean-up efforts would begin immediately and be completed as soon as possible, taking precedence over normal work. Paint and solvent spills should be considered as oil spills and thus prevented from entering the Columbia River.
- Assess the Vanguard Nursery property for areas of potential contamination prior to property acquisition (Alternative EC-1 only).
- Conduct site assessments, as necessary, to evaluate soil, sediment, and groundwater conditions near the hazardous materials. Evaluate soil conditions near construction as grading and drilling activities occur. Remove and dispose of hazardous materials, and remediate contaminated soil, sediment, and groundwater in accordance with applicable regulations.

- Evaluate soil conditions along the railroad grade as construction grading occurs. If contaminated soil is suspected, assess soil conditions and remediate, as necessary, in accordance with applicable regulations.
- If soil and groundwater contamination that has not previously been assessed is encountered during drilling, clearing, and grading activities in the Project footprint, these impacts would be mitigated by assessment and remediation following WSDOT Standard Specification Section 1-07.5(3) "State Department of Ecology" and ODOT Standard Specification Section 00290.29(f) "Unexpected Contamination."

6.2. Long-Term Impacts

No measures are required to avoid, minimize, or mitigate long-term impacts to hazardous materials.

7. PREPARERS

Individuals involved in preparing this technical report are identified in Exhibit 17.

Exhibit 17. List of Preparers

Name	Role	Education	Years of Experience
Peter Geiger	Hazardous Materials Lead	MSc, Physics BS, Physics	31
Patrick Romero, INCE, ENV SP	Hazardous Materials QC Reviewer	MS, Environmental Policy and Management BS, Environmental Science	20
Angela Findley	Project Manager; QC	MS, Forest Resources BA, Mathematics	25
Scott Polzin, PMP	Environmental Task Lead; QC	MCRP, Planning BS, Finance	24

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 02/06/2019 has revealed that there is 1 SEMS site within approximately 0.25 miles of the target property.

WA CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the WA CSCSL list, as provided by EDR, and dated 01/15/2019 has revealed that there are 2 WA CSCSL sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/01/2018 has revealed that

RMP: When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

A review of the RMP list, as provided by EDR, and dated 02/01/2019 has revealed that there are 2 RMP sites within approximately 0.25 miles of the target property.

CA HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the CA HAZNET list, as provided by EDR, and dated 12/31/2017 has revealed that there is 1 CA HAZNET site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 8 EDR Hist Auto sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Due to poor or inadequate address information, the following sites were not mapped. Count: 10 records.

<u>Site Name</u>	<u>Database(s)</u>
ASBURY TANKER ROLLOVER	OR ECSI
UNION PACIFIC RR - HOOD RIVER	OR UST
HOOD RIVER, PORT OF- HOOD RIVER AI	RCRA NonGen / NLR, FINDS, ECHO
HOOD RIVER SAND & GRAVEL CO.	US MINES
HOOD RIVER DRY CLEANER (FORMER)	OR RGA HWS
CARSON OIL - HOOD RIVER	OR RGA HWS
HOOD RIVER I-84 ON-RAMP	OR RGA HWS
HOOD RIVER LANDFILL	OR RGA LF
HOOD RIVER SPRAY MANUFACTURING CO.	OR RGA HWS
PORT OF HOOD RIVER - HEELSIDE SITE	OR RGA HWS

OVERVIEW MAP - 5622424.2S

Target Property

Sites at elevations higher than or equal to the target property

Sites at elevations lower than the target property

Manufactured Gas Plants

National Priority List Sites

Dept. Defense Sites

Indian Reservations BIA

County Boundary

Power transmission lines

100-year flood zone

500-year flood zone

National Wetland Inventory

State Wetlands

Areas of Concern

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

NARR ID: 5732889
NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: DCROUSE
Updated Date: 07/15/2003
Decode for NarcdID: Contamination
NARR Comments: (3/4/92 CR/DEQ) Basin pumps picked up product from the subsurface after heavy rains. Some product was pumped into a marina that's connected to the Columbia River before the pump was shut off. Release estimated at 100 gallons. (7/15/03 DMC/SAS) Site is an active bulk plant that may have been a former Standard Oil bulk plant from at least circa 1950, possibly earlier.

NARR Comments: (3/4/92 CR/DEQ) Pump was shut off; sheen contained and absorbed. Pump outlet was diverted to a tanker until clear. No further evidence in subsurface. Contractor will assess possible source and possible residual in soil and groundwater and then submit a report with lab analyses. Referred to DEQ/SAS for further assessment. (Closed basin was drained by the Army Corps of Engineers.) (7/15/03 DMC/SAS) DEQ's Eastern Region Hazardous Waste (ER/HW) is the lead program. (8/18/06 KJR/SAS) site recommended for screening. site information request sent. (12/20/11 KJR/SAS) Strategy recommendation completed at site. Site is a high priority for XPA.

FINDS:

Registry ID: 110014203833

Environmental Interest/Information System

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and

1006857937

it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

NARR Comments: (6/25/02 DMC/SAS) Site added to database for tracking as a former bulk plant; site is currently an archery shop. (12/2/04 DMC/SAS) Site is a former General Petroleum/Mobil bulk plant that was operated by the corporation from ~1941 through 1977, then operated by local jobbers from ~1977 through 1982. Aboveground storage tanks (ASTs) are believed to have been removed circa 1982.

NARR Comments: (6/25/02 DMC/SAS) Site added to database for tracking as a former bulk plant. (11/30/04 DMC/SAS) Bob Kendall, Windy River Archery, called concerning a questionnaire he received as part of a property transfer. (8/23/05 KJR) Site information requests sent to past owners and operators. Responses due 9/30/05. (5/23/06 DMC/SAS) Site screening completed; site recommended for a high priority preliminary assessment with sampling based on long-term use as a bulk plant near the banks of the Hood River.

Updated By: DANDERS
Updated Date: 01/15/2008
Decode for NarcdID: Site History
NARR Comments: The Site distributed petroleum, oil and lubricants (POLs) and appeared to have the capacity for 60,000 to 70,000 gallons of storage capacity in aboveground storage tanks (ASTs), a filling rack, drum storage and warehousing facilities based on historical evidence. Its proximity to the railroad tracks also probably enabled loading and unloading of petroleum products. The bulk plant consisted of a warehouse (with office and garage), at least three larger and two smaller aboveground storage tanks (ASTs) within a concrete berm, a loading rack, and associated piping. The larger ASTs appeared to be in the 20,000-gallon range and the smaller ASTs appeared to be in the 10,000-gallon range. The site was adjacent to a rail line and was most likely refueled by tanker cars during the early years of operation. A bulk plant warehouse was used for storing petroleum products, including lubricants, in 55-gallon drums and smaller containers (usually 5 to 10 gallons). Other areas of concern include the loading rack, filler stems, indoor and outdoor drum storage areas, potential waste disposal areas (such as tank sludge), and the loading dock.

NARR Comments: The former Mobil Oil Bulk Plant Hood River (Site) is located at 2680 Dock Road in Hood River, Oregon. The site was an active bulk petroleum storage facility (bulk plant) for more than 40 years until 1983, and is currently active as an archery sales and U-Haul rental facility. The Site was discovered as part of DEQ's Eastern Region Site Assessment (ER/SAS) Bulk Plant Site Discovery project and is one of two bulk plants located on Dock Road. The other site is the Carson Oil Bulk Plant (former Standard Oil) site, ECSI# 1366. The 0.75-acre site is in an area of mixed industrial, commercial, and recreational

means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

SUPERFUND (NON-NPL)

US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

(salmon), and local newspaper articles indicating potential redevelopment interests. DEQ made initial inquiries to the site owners during 2000 and performed limited site walkovers during 2001. In addition, verbal and written Pollution Complaints on rust colored foam in the marina were investigated during 2001. A drought in 2001 exposed visibly stained areas of the shoreline near the launching ways and east of the ways, extending to the southeastern corner of the marina. Stains were mostly rust and reddish in color, with a rainbow-like sheen. Based on these visual observations, DEQ staff took a composite sample on March 19, 2002 and high arsenic and chromium levels were detected.

Updated Date: 12/30/2002
Decode for NarcdID: General Site Description
NARR Comments: The site is approximately 5.5 acres and includes submerged acres that are part of a marina that is also owned by the Port of Hood River. The existing Hood River waterfront was created for industrial use by extensive dredge filling during the 1960s. Industrial use began to decline during the 1990s as tourism and river sports like windsurfing became the primary waterfront activities. The area has also seen a steady increase in in-lieu fishing sites for Native Americans during this time period. The site rests on natural alluvial deposits and dredged fill material. Site soils are gravels, fine sand, and sandy silts. The site is in the Columbia River Gorge National Scenic Area, which has an underlying base of thick basalt flows. Site topography slopes gently to the Columbia River. The Nichols family and partners have owned and operated shipbuilding and repair facilities at four locations in the same general vicinity along the Columbia River waterfront since 1941. The subject site, used from the early 1970s through 1998, includes an 80' x 250' x 50' workshop with launching ways (and overhead cranes and periodic welding stations), an office building, and a former building's concrete footprint. Prior to the industrial use by Nichols Boat Works and other waterfront facilities, the marina served as a boat basin for privately owned vessels. According to Mr. Nichols, the basin also included a floating Texaco gas station. In addition, two historic gas stations were located near the southwest corner of the marina in the 1960s and 1970s. The active gas station was once destroyed by fire.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: SOIL/SEDIMENTS: Heavy metals were detected in soil at the shoreline surface by DEQ sampling (arsenic and chromium at 115 mg/kg and 431 mg/kg, respectively). Portions of the impacted area can be submerged when river levels are at their highest. The extent of the contamination is unknown, but may extend into the workshop, to the former work areas east of the workshop, and into the immediate shoreline sediments. More information is needed to confirm the lateral and vertical extent of soil/sediment contamination. The site is fenced and posted, but dermal contact by workers, authorized visitors, or trespassers is possible. During one DEQ site visit, friends of the family, who were allowed to store vehicles in the green workshop, were interviewed. The workshop is no longer being used for vehicle storage; however it has been sold and will be dismantled, so worker activity is planned and direct contact is likely. SURFACE WATER: The nearest surface water is the marina connected to the Columbia River (and a thin mole of land separates the site from the mouth of the Hood River to the east). Launching ways extend from the repair facility, into the marina, and elevated levels of arsenic and chromium were detected between the ways. Areas of visibly stained and discolored sediments were observed during the 2001 drought, but Mr. Nichols believes some of this might be naturally occurring. The marina has dock facilities for cruise ships, is used for recreational fishing, and is connected (or empties) into an area used extensively for contact recreation (wind and kite surfing and kayaking). A storm drain empties into the southwest

MAP FINDINGS

NICHOLS BOAT WORKS CO. (Continued)

1006853076

corner of the marina. GROUNDWATER: More information is needed, but depth to groundwater is expected to be very shallow (at the approximate level of the Columbia and Hood Rivers). There is no known groundwater sampling data for the site; however, groundwater acting as recharge for the river would pass through contaminated soils and sediments if contamination extends deeper than the surface. More site-specific data is needed on groundwater. Groundwater hydrology would be influenced by the northern flow of the Hood River, the western flow of the Columbia River, and the tidal flows within the marina. AIR: Site is located in the Columbia Gorge, an area noted for strong, consistent winds, generally in easterly and westerly directions. More information is needed, but inhalation is a pathway of concern due to on-site and nearby receptors. Sandblasting operations create significant amounts of dust along with the spent grit. A footbridge over the Hood River, pathways to the river walk and recreational activities along the mole, and parking next to the site have resulted in increased pedestrian foot traffic near the site. Because sensitive aquatic species (e.g., salmon) may be present, and contaminants above screening levels (e.g., copper and PAHs) has been documented, a removal action may be warranted for the site. Any removal action would include an evaluation of remedies for both the upland portion and in-water portions of the site. DEQ needs more information to evaluate the feasibility of any removal actions; the following tasks are needed to fill these data gaps.

Updated By: GWISTAR
Updated Date: 11/20/2007
Decode for NARCDID: Remedial Action
NARR Comments: (12/30/02 DGA/SRS) A limited release of heavy metals (arsenic and chromium) has been confirmed in soil, and observations of additional potential release areas have been documented. However, it is likely that the release may be limited to the site's immediate vicinity. Available, but limited, sampling data indicates the contamination does not extend the length of the marina and into the Columbia River. However, more sampling is needed to confirm this assumption and to define the nature and (lateral and vertical) extent of the release. Additional information is also needed on the areas used for sandblasting and spent grit storage, paint and solvent storage and use, and bilge or wastewater handling, as well as the locations of the former ASTs. DEQ determined that the owners and operators of the Nichols site were unable to conduct an investigation or cleanup, and the site was referred to the Orphan Site Program for further action. Nichols Boat Works was designated as an Orphan Site in August 2002, and DEQ is currently conducting a Site Investigation at the property. (2/7/05 DGA/SRS) In 2002 and early 2003, DEQ performed a focused Site Investigation (SI) to evaluate the extent to which contaminants of interest had affected site media. Based on site activities and history, these were determined to be petroleum-related VOCs, polynuclear aromatic hydrocarbons (PAHs), and metals. The SI demonstrated that site soils are impacted by metals, and that shallow groundwater and sediments are impacted by metals and PAHs. Generally, metals concentrations in sediment were highest near the boat ways and near shore areas, and in specific areas of upland soils where

sandblasting or related activities had occurred in the past. DEQ completed a Level I/II ecological risk evaluation in fall 2003, concluding that localized areas of sediment, upland soils, and groundwater were impacted by metals and PAHs at concentrations above DEQ Level II Screening Level Values (SLVs).

NARR Comments: (2011) While it has been reported that most sandblasting was done on clean steel hulls, the facility also operated during the years when marine anti-fouling paints contained tributyltin (TBT). TBT is highly toxic in low concentrations to fish and other forms of aquatic life. Sources of TBT could have ranged from slow leaching from moored hulls, over-spray of paint, and paint chips in sandblast grit. However, based on a zoning change, deed restrictions, proposed development plans, and residual human health and ecological risk assessments, DEQ has confirmed that the site poses no unacceptable risks.

NARR Comments: The Nichols Boat Works (Nichols)Site is at the southern end of a horseshoe-shaped marina that is adjacent to the confluence of Hood River and the Columbia River. The site is approximately 5.5 acres and includes submerged acreage that is part of a marina that is operated by the Port of Hood River. The existing Hood River waterfront was created for industrial use by extensive dredge filling during the 1960s. DEQ approved a final remedy for the site to address soil and sediment contamination at the former Site on the Columbia River waterfront in Hood River in 2007. The remedy, is based on a zoning change, deed restrictions, proposed development plans, and residual human health and ecological risk assessments confirms that the site does not currently pose any unacceptable risks. The remedy includes a contingency plan to address possible exposure of deeper sediments left beneath a clean layer of sediment, in the event of future dredging or shoreline development.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Remark:	Responded to report of a leaking fuel-oil tank in a basement of a residence. Arrived to find the homeowner containing the leak into buckets. Approximately 5 gal was spilled onto the floor surrounding the tank. Approximately 45gal had been collected in various containers which were taken outside by fire crews upon arrival. Gas meter determined no LEL levels in the basement. Homeowner called servepro for cleanup. All units cleared.

Remark:	Someone called HR Station to report a large fuel leak, I transferred them to the dispatch office. They wouldn't leave their name with dispatch. Station Alarm- VALERO GAS LEAK INTO A MANHOLE - SEVERAL FEET DEEP OF GAS MAINT ALMOST PAST OUT WHEN THEY OPENED IT. E-2 Arrived, staged up wind and investigated. Staff on-site reported there was an issue with a pump/part within their below ground fuel holding tank that pumps fuel to their above ground pump system. Maintenance has been on-site already and will order parts and fix this next week. Staff didn't call the Fire Department as there was no help needed. There is no leak or issue reportedly seen to the public. No odor or leak near the area. E-2 cleared.

NARR Comments: (2/16/07 DMC/SAS) Site is a low priority for a site screening unless additional information is received indicating a significant release has occurred that is impacting off-site targets including the Hood or Columbia rivers. (3/31/10 KJR/SAS) Federal screening underway. (6-26-2013, Bob Schwarz) DEQ received a call March 2003 from a Hood River resident complaining that old pieces of railroad ties had been abandoned along the north side of the tracks at the train station. DEQ asked Union Pacific Railroad to remove the ties, which they did in October 2004.

Environmental Interest/Information System
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/11/2019	Source: EPA
Date Data Arrived at EDR: 03/14/2019	Telephone: N/A
Date Made Active in Reports: 04/01/2019	Last EDR Contact: 04/05/2019
Number of Days to Update: 18	Next Scheduled EDR Contact: 07/15/2019
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 02/06/2019	Source: EPA
Date Data Arrived at EDR: 02/15/2019	Telephone: 800-424-9346

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (206) 553-1200

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (206) 553-1200

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (206) 553-1200

Federal institutional controls / engineering controls registries

LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 10/17/2018	Source: Department of the Navy
Date Data Arrived at EDR: 10/25/2018	Telephone: 843-820-7326
Date Made Active in Reports: 12/07/2018	Last EDR Contact: 02/07/2019
Number of Days to Update: 43	Next Scheduled EDR Contact: 05/27/2019
	Data Release Frequency: Varies

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 01/31/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 02/04/2019	Telephone: 703-603-0695
Date Made Active in Reports: 03/08/2019	Last EDR Contact: 02/04/2019
Number of Days to Update: 32	Next Scheduled EDR Contact: 06/10/2019
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 01/31/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 02/04/2019	Telephone: 703-603-0695

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

WA PTAP: PTAP Site Listing

A list of sites accepted into the Petroleum Technical Assistance Program. The Petroleum Technical Assistance Program (PTAP) expands the state's ability to respond to the high customer demand to clean up petroleum contaminated sites. Under the PTAP, the Pollution Liability Insurance Agency (PLIA) may provide informal site-specific technical consultations and issue written opinion letters to persons conducting independent remedial actions at qualifying petroleum cleanup sites. PLIA may provide these services under the authority of RCW 70.149.040(9) and the Model Toxics Control Act (MTCA), Chapter 70.149 RCW and Chapter 173-340 WAC.

Date of Government Version: 02/12/2019	Source: Department of Ecology

Number of Days to Update: 72	Next Scheduled EDR Contact: 04/29/2019
	Data Release Frequency: Quarterly

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

	Data Release Frequency: Varies

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

WA RGA LUST: Recovered Government Archive Leaking Underground Storage Tank

The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Ecology in Washington.

Date of Government Version: N/A	Source: Department of Ecology
Date Data Arrived at EDR: 07/01/2013	Telephone: N/A
Date Made Active in Reports: 12/24/2013	Last EDR Contact: 06/01/2012
Number of Days to Update: 176	Next Scheduled EDR Contact: N/A
	Data Release Frequency: Varies

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

NY MANIFEST: Facility and Manifest Data

Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Southwest Map: 6067146 HOOD RIVER, OR
Version Date: 2014

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

5301000005B	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
WHITE SALMON	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Xerofluvents

Soil Surface Texture: stratified loamy sand to cobbly loamy sand to gravelly loamy sand

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	stratified loamy sand to cobbly loamy sand to gravelly loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141.11 Min: 42.34	Max: 6.5 Min: 6.1
2	9 inches	59 inches	stratified very cobbly sand to cobbly loamy sand to gravelly loamy sand to sand to loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141.11 Min: 42.34	Max: 6.5 Min: 6.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: Water

Soil Surface Texture: stratified loamy sand to cobbly loamy sand to gravelly loamy sand

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EDR Historical Topo Map Report

04/16/19

Site Name:

Hood River Bridge
1000 E. Port Marina Drive
Hood River, OR 97031
EDR Inquiry # 5622424.4

Client Name:

Parsons Brinckerhoff
999 3rd Avenue
Seattle, WA 98104
Contact: Peter Geiger

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Parsons Brinckerhoff were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

Coordinates:

P.O.#	NA	Latitude:	45.713462 45° 42' 48" North
Project:	80550A	Longitude:	-121.50012 -121° 30' 0" West
		UTM Zone:	Zone 10 North
		UTM X Meters:	616736.90
		UTM Y Meters:	5063305.88
		Elevation:	77.00' above sea level

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Parsons Brinckerhoff were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # ADC8-4B3B-B09C

PO # NA

Project 80550A

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: ADC8-4B3B-B09C

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Parsons Brinckerhoff (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.
